Mathematics (MATH)

MATH 0110: Intermediate Algebra
MATH 0110 is a preparatory course for college algebra that carries no credit towards any baccalaureate degree. However, the grade received in MATH 0110 does count towards a student's overall GPA. The course covers operations with real numbers, graphs of functions, domain and range of functions, linear equations and inequalities, quadratic equations; operations with polynomials, rational expressions, exponents and radicals; equations of lines. Emphasis is also put on problem-solving.

Credit Hours: 3

MATH 1050: Quantitative Reasoning
Promotes mathematical literacy among students. This course will cover important mathematical ideas and problem solving skills in the context of science, technology, and/or society. Topics may include: logic and critical thinking, Venn Diagrams, problem solving, sets, units of measure, percentages and ratios, counting and probability, exponential growth and decay, linear and exponential models. Quantitative Reasoning is designed to stimulate interest in and appreciation of mathematics and quantitative reasoning as valuable tools for comprehending the world in which we live. This course does not satisfy the prerequisite of any other math course.

Credit Hours: 3
Prerequisites: C- or higher in MATH 0110 or a sufficient score on the ALEKS (or MMT) exam

MATH 1100: College Algebra
A review of exponents, order of operations, factoring, and simplifying polynomial, rational, and radical expressions. Topics include: linear, quadratic, polynomial, rational, inverse, exponential, and logarithmic functions and their applications. Students will solve equations involving these functions, and systems of linear equations in two variables, as well as inequalities. See the Math website for specific requirements. A student may receive at most 5.0 credit hours among MATH 1100, MATH 1120, MATH 1140, MATH 1160.

Credit Hours: 3
Prerequisites: C- or higher in MATH 0110 or a sufficient score on the ALEKS exam or MyMathTest Intermediate Algebra score of 70% or higher

MATH 1140: Trigonometry
A student may receive only 5 credits from among MATH 1100, MATH 1140, and MATH 1160. A Student may receive at most 5.0 credit hours from MATH 1100, MATH 1120, MATH 1140, and MATH 1160.

Credit Hours: 2
Prerequisites: C- or higher in MATH 1100 or sufficient ALEKS score or MyMathTest College Algebra score of 70% or higher

MATH 1160: Precalculus Mathematics
Review of elementary algebra. Background material for MATH 1500, including algebraic, trigonometric, logarithmic, exponential functions. A student may receive at most 5 credits from among MATH 1100, MATH 1140, and MATH 1160.

Credit Hours: 5

Prerequisites: B+ or higher in MATH 0110 (at MU), or C- or higher in MATH 1100, or sufficient ALEKS score or MyMathTest College Algebra score of 60% or higher

MATH 1300: Finite Mathematics
A selections of topics in finite mathematics such as: basic financial mathematics, counting methods and basic probability and statistics, systems of linear equations and matrices. Warning: without a College Algebra exemption, a sufficient ALEKS score will not suffice unless it is a proctored exam (for MATH 1100 credit).

Credit Hours: 3
Prerequisites: Grade of C- or higher in MATH 1100, or MATH 1160, or both a College Algebra exemption and sufficient ALEKS score

MATH 1320: Elements of Calculus
Introductory analytic geometry, derivatives, definite integrals. Primarily for Computer Science BA candidates, Economics majors, and students preparing to enter the College of BUS. No credit for students who have completed a calculus course. A student may receive credit for MATH 1320, or MATH 1400 but not both. A student may receive at most 5 credit hours among MATH 1320 or MATH 1400 or MATH 1500.

Credit Hours: 3
Prerequisites: MATH 1100, or MATH 1160, or sufficient ALEKS score

MATH 1360: Geometric Concepts
This course is primarily for education majors. This course covers topics of Euclidean geometry such as the study of points, lines, angles, polygons, circles, congruence, similarity, transformations, symmetry, area, surface area, arc length, and volume. Polyhedra, spheres, cones, and other solids are discussed. The course includes constructions and proofs, and uses inductive and deductive reasoning throughout. Math Reasoning Proficiency Course.

Credit Hours: 3
Prerequisites: C- or higher in MATH 1100 or sufficient ALEKS exam score or MATH 1160 or equivalent

MATH 1400: Calculus for Social and Life Sciences I
The real number system, functions, analytic geometry, derivatives, integrals, maximum-minimum problems. No credit for students who have completed a calculus course. A student may receive credit for MATH 1320 or MATH 1400 but not both. A student may receive at most 5 units of credit among the MATH 1320 or MATH 1400 and MATH 1500. Math Reasoning Proficiency Course.

Credit Hours: 3
Prerequisites: grade of C- or higher in MATH 1100, or MATH 1160, or sufficient ALEKS score

MATH 1500: Analytic Geometry and Calculus I
Elementary analytic geometry, functions, limits, continuity, derivatives, antiderivatives, definite integrals. A student may receive at most 5 units of credit among the Mathematics courses MATH 1320 or MATH 1400 and MATH 1500. Math Reasoning Proficiency Course.

Credit Hours: 5
Prerequisites: grade of C- or higher in MATH 1160 or C- or higher in both MATH 1100 and MATH 1140 or sufficient ALEKS score or MyMathTest PreCalculus score of 70% or higher

MATH 1305: Mathematical Perspectives
Promotes mathematical literacy among students. This course will cover important mathematical ideas and problem solving skills in the context of science, technology, and/or society. Topics may include: logic and critical thinking, Venn Diagrams, problem solving, sets, units of measure, percentages and ratios, counting and probability, exponential growth and decay, linear and exponential models. Quantitative Reasoning is designed to stimulate interest in and appreciation of mathematics and quantitative reasoning as valuable tools for comprehending the world in which we live. This course does not satisfy the prerequisite of any other math course.

Credit Hours: 3
Prerequisites: C- or higher in MATH 0110 or a sufficient score on the ALEKS (or MMT) exam

MATH 1320: Elements of Calculus
Introductory analytic geometry, derivatives, definite integrals. Primarily for Computer Science BA candidates, Economics majors, and students preparing to enter the College of BUS. No credit for students who have completed a calculus course. A student may receive credit for MATH 1320, or MATH 1400 but not both. A student may receive at most 5 credit hours among MATH 1320 or MATH 1400 or MATH 1500.

Credit Hours: 3
Prerequisites: MATH 1100, or MATH 1160, or sufficient ALEKS score

MATH 1360: Geometric Concepts
This course is primarily for education majors. This course covers topics of Euclidean geometry such as the study of points, lines, angles, polygons, circles, congruence, similarity, transformations, symmetry, area, surface area, arc length, and volume. Polyhedra, spheres, cones, and other solids are discussed. The course includes constructions and proofs, and uses inductive and deductive reasoning throughout. Math Reasoning Proficiency Course.

Credit Hours: 3
Prerequisites: C- or higher in MATH 1100 or sufficient ALEKS exam score or MATH 1160 or equivalent

MATH 1400: Calculus for Social and Life Sciences I
The real number system, functions, analytic geometry, derivatives, integrals, maximum-minimum problems. No credit for students who have completed a calculus course. A student may receive credit for MATH 1320 or MATH 1400 but not both. A student may receive at most 5 units of credit among the MATH 1320 or MATH 1400 and MATH 1500. Math Reasoning Proficiency Course.

Credit Hours: 3
Prerequisites: grade of C- or higher in MATH 1100, or MATH 1160, or sufficient ALEKS score

MATH 1500: Analytic Geometry and Calculus I
Elementary analytic geometry, functions, limits, continuity, derivatives, antiderivatives, definite integrals. A student may receive at most 5 units of credit among the Mathematics courses MATH 1320 or MATH 1400 and MATH 1500. Math Reasoning Proficiency Course.

Credit Hours: 5
Prerequisites: grade of C- or higher in MATH 1160 or C- or higher in both MATH 1100 and MATH 1140 or sufficient ALEKS score or MyMathTest PreCalculus score of 70% or higher

</tr>
<tr>
<td>MATH 1800</td>
<td>Introduction to Analysis I</td>
<td>This course will cover the material taught in a traditional first semester calculus course at a more rigorous level. The focus of this course will be on proofs of basic theorems of differential and integral calculus. The topics to be covered include axioms of arithmetic, mathematical induction, functions, graphs, limits, continuous functions, derivatives and their applications, integrals, the fundamental theorem of calculus and trigonometric functions. Students in this class will be expected to learn to write clear proofs of mathematical assertions. Some previous exposure to calculus is helpful but not required. No credit for MATH 1800 and MATH 1320, MATH 1400 or MATH 1500. Graded on A-F basis only.</td>
<td>5</td>
<td>ACT mathematics score of at least 31 and ACT composite of at least 30 or instructor's consent</td>
</tr>
<tr>
<td>MATH 1900</td>
<td>Introduction to Analysis II</td>
<td>This course is a continuation of MATH 1800. In this course we shall cover uniform convergence and uniform continuity, integration, and sequences and series. The topics will be covered in a mathematically rigorous manner. No credit for MATH 1900 and MATH 1700 or MATH 2100. Graded on A/F basis only.</td>
<td>5</td>
<td>MATH 1800 or instructor's consent</td>
</tr>
<tr>
<td>MATH 2100</td>
<td>Calculus for Social and Life Sciences II</td>
<td>Riemann integral, transcendental functions, techniques of integration, improper integrals and functions of several variables. No credit for students who have completed two calculus courses. Math Reasoning Proficiency course.</td>

MATH 3000W: Introduction to Advanced Mathematics - Writing Intensive
Gateway to theoretical math courses. Focus on reading and writing math proofs/rigorously developing background needed in Adv Calc/Abstract Alg. Topics include logic, set theory, properties of functions and integers, the real number system, completeness of the real numbers, sequences of real numbers.

Credit Hours: 3
Prerequisites: Consent of Department required. Recommended MATH 1700

MATH 4001: Topics in Mathematics-General
Organized study of selected topics. Subjects and earnable credit may vary from semester to semester. May repeat for credit with Departmental consent.

Credit Hour: 1-99
Prerequisites: Consent of Department required

MATH 4002: Topics in Mathematics-Biological/Physical/Math
Organized study of selected topics. Subjects and earnable credit may vary from semester to semester. May repeat for credit with Departmental consent.

Credit Hour: 1-99
Prerequisites: MATH 2300 and instructor's consent

MATH 4060: Connecting Geometry to Middle and Secondary Schools
(cross-leveled with MATH 7060). Euclidean foundations, logic, Euler Characteristic, congruence, area, Pick's Theorem, volume, Cavalieri's Principle, surface area, similarity, symmetry, transformations, matrices, introduction to spherical geometry.

Credit Hours: 3
Prerequisites: Consent of Department required
Recommended: MATH 1360 or MATH 1500

MATH 4070: Connecting Algebra to Middle and Secondary Schools
A detailed study of integer and rational arithmetic and algebra. Topics include: Binomial Theorem, induction, division algorithm, Euclid's Algorithm, Fundamental Theorem of Arithmetic, Pythagorean triples, modular arithmetic and generalizations to polynomials, matrices and other axiomatic structures.

Credit Hours: 3
Prerequisites: MATH 1320, enrollment is restricted to Math Education majors

MATH 4080: Calculus Connections
Course topics include: sequences, series, functions, limits, continuity, differentiation, optimization, curve sketching, antidifferentiation, areas of plane regions, lengths of plane curves, areas of surfaces of revolution, and volumes of solids.

Credit Hours: 3
Prerequisites: MATH 1160, enrollment is restricted to Math Education majors

MATH 4100: Differential Equations
Traditional introductory course in ordinary differential equations. Includes 1st and 2nd order linear differential equations with numerous applications; Laplace transforms; power series solutions; numerical methods, linear systems.

Credit Hours: 3
Prerequisites: Grade of C- or above in MATH 2300

MATH 4110: Advanced Calculus With Applications
Linear mappings, Jacobi matrices and determinants, change of variables, vector fields, line and surface integrals, theorems of Green, Gauss and Stokes, sequences and series of functions, uniform convergence, special functions.

Credit Hours: 3
Prerequisites: MATH 2300

MATH 4120: Combinatorics
Study of a variety of topics from combinatorial mathematics, especially graph theory and enumerative combinatorics. Topics include graph coloring, matchings and coverings, generating functions, recurrence relations, Polya's Enumeration Theorem, introduction to Ramsey theory.

Credit Hours: 3
Prerequisites: MATH 2300 or instructor's consent

MATH 4140: Matrix Theory
Basic properties of matrices, determinants, vector spaces, linear transformations, eigenvalues, eigenvectors, and Jordan normal forms. Introduction to writing proofs.

Credit Hours: 3
Prerequisites: Grade of C- or better in MATH 2300 or MATH 2320. Writing intensive sections require ENGLSH 1000

MATH 4140W: Matrix Theory - Writing Intensive
Basic properties of matrices, determinants, vector spaces, linear transformations, eigenvalues, eigenvectors, and Jordan normal forms. Introduction to writing proofs.

Credit Hours: 3
Prerequisites: Grade of C- or better in MATH 2300 or MATH 2320. Writing intensive sections require ENGLSH 1000

MATH 4150: History of Mathematics
This is a history course with mathematics as its subject. Includes topics in the history of mathematics from early civilizations onwards. The growth of mathematics, both as an abstract discipline and as a subject which interacts with others and with practical concerns, is explored.

Prerequisites or Cirequisite: MATH 2300 or MATH 2340. Writing intensive sections require ENGLSH 1000

Credit Hours: 3

MATH 4150W: History of Mathematics - Writing Intensive
This is a history course with mathematics as its subject. Includes topics in the history of mathematics from early civilizations onwards. The
growth of mathematics, both as an abstract discipline and as a subject which interacts with others and with practical concerns, is explored. Prerequisites or Corequisite: MATH 2300 or MATH 2340. Writing intensive sections require ENGLSH 1000.

**Credit Hours:** 3

**MATH 4300: Numerical Analysis**
Machine arithmetic, approximation and interpolation, numerical differentiation and integration, nonlinear equations, linear systems, differential equations, error analysis. Selected algorithms will be programmed for solution on computers.

**Credit Hours:** 3
**Prerequisites:** Grade of C- or better in MATH 2300 and MATH 4100

**MATH 4310: Numerical Linear Algebra**
Solution of linear systems of equations by direct and iterative methods. Calculation of eigenvalues and eigenvectors of matrices. Selected algorithms programmed for solution on computers.

**Credit Hours:** 3
**Prerequisites:** MATH 2300 and familiarity with software such as Mathematica, MatLab, Maple, etc

**MATH 4315: Introduction to Mathematical Statistics**
(same as STAT 4710). Introduction to theory of probability and statistics using concepts and methods of calculus.

**Credit Hours:** 3
**Prerequisites:** MATH 2300 or instructor's consent

**MATH 4320: Introduction to Probability Theory**
(same as STAT 4750). Probability spaces; random variables and their distributions; repeated trials; probability limit theorems.

**Credit Hours:** 3
**Prerequisites:** MATH 2300 or instructor's consent

**MATH 4325: Linear Programming**

**Credit Hours:** 3
**Prerequisites:** MATH 4140 or instructor's consent

**MATH 4330: Theory of Numbers**
Divisibility, factorization, arithmetic functions, means value theorems, distribution of prime numbers, congruences, primitive roots, character theory, Riemann zeta function, and Dirichlet L-functions.

**Credit Hours:** 3
**Prerequisites:** Grade of C- or higher in MATH 2300. Recommended MATH 2320

**MATH 4335: College Geometry**
Euclidean geometry from an advanced viewpoint. Synthetic and coordinate methods will be used. The Euclidean group of transformations will be studied.

**Credit Hours:** 3
**Prerequisites:** MATH 2300

**MATH 4340: Projective Geometry**
Basic ideas and methods of projective geometry built around the concept of geometry as the study of invariants of a group. Extensive treatment of collineations.

**Credit Hours:** 3
**Prerequisites:** MATH 2300

**MATH 4345: Foundations of Geometry**
Coordination of affine, projective planes by means of various kinds of algebraic structures: planar ternary rings, Veblen-Wedderburn systems, divisions rings, skew fields, and fields.

**Credit Hours:** 3
**Prerequisites:** MATH 2300

**MATH 4350: Introduction to Non-Euclidean Geometry**
Account of rise, development of non-Euclidean geometries. Intensive study of plane hyperbolic geometry.

**Credit Hours:** 3
**Prerequisites:** MATH 2300

**MATH 4355: Introduction to Financial Derivatives and Options**
(cross-leveled with MATH 7355). Long and short positions, forward contracts, exchange traded index futures, European and American call and put options, put-call parity, trading and hedging strategies, synthetic transactions, arbitrage, currency options, fixed income portfolio management, duration, convexity, interest rate and currency swaps, embedded options.

**Credit Hours:** 3
**Prerequisites:** Grade of C- or higher in MATH 2300 and either STAT 2500 or STAT 4710 or MATH 4315

**MATH 4360: Actuarial Mathematics**
(cross-leveled with MATH 7360). Basic actuarial methods, mathematical population studies and models of population growth. Compound interest and annuities certain. Values of endowment and annuities, calculation of premiums, surrender values. Stochastic models of populations growth.

**Credit Hours:** 3
**Prerequisites:** MATH 2300 and either STAT 2500 or STAT 4710 or MATH 4315

**MATH 4370: Actuarial Modeling I**
This course covers the concepts underlying the theory of interest and their applications to valuation of various cash flows, annuities certain, bonds, and loan repayment. This course is designed to help students prepare for Society of Actuaries exam FM (Financial Mathematics). It is oriented towards problem solving techniques applied to real-life situations and illustrated with previous exam problems.

**Credit Hours:** 3
Prerequisites: grade of C or better in MATH 2300

MATH 4371: Actuarial Modeling II
(cross-leveled with MATH 7371). The goal of this course is to teach the basic theory of life contingent actuarial models and the application of those models to insurance and other financial risks. The topics covered are part of the readings for the Society of Actuaries exam MLC (Models for Life Contingencies) and are illustrated with past exam questions.
Credit Hours: 3
Prerequisites: MATH 4320 or STAT 4750, and MATH 4370

MATH 4400: Introduction to Topology
Topics from topology of Euclidean spaces, generalizations to metric spaces and topological spaces. Fundamentals of point set topology.
Credit Hours: 3
Prerequisites: MATH 2300

MATH 4500: Applied Analysis
Solution of the standard partial differential equations (wave, heat, Laplace's eq.) by separation of variables and transform methods; including eigenfunction expansions, Fourier and Laplace transform. Boundary value problems, Sturm-Liouville theory, orthogonality, Fourier, Bessel, and Legendre series, spherical harmonics.
Credit Hours: 3
Prerequisites: Grade of C- or higher in MATH 4100

MATH 4510: Higher Algebra
Introduction to rings, integral domains, fields, groups.
Credit Hours: 3
Prerequisites: MATH 2300 or MATH 2320

MATH 4520: Statistical Inference I
(same as STAT 4760). Sampling; point estimation; sampling distribution; tests of hypotheses; regression and linear hypotheses.
Credit Hours: 3
Prerequisites: MATH 2300 or MATH 2320

MATH 4540: Mathematical Modeling I
Solution of problems from industry, physical, social and life sciences, economics, and engineering using mathematical models.
Credit Hours: 3
Prerequisites: Grade of C- or higher in MATH 2300 and MATH 4100
Recommended: Familiarity with software such as MATHEMATICA, MATLAB, or MAPLE

MATH 4560: Nonlinear Dynamics, Fractals and Chaos
Conceptual introduction to nonlinear dynamics, bifurcation and stability of steady states, chaos in nonlinear differential equations and maps, fractal dimension, strange attractors, and applications to physical science.
Credit Hours: 3
Prerequisites: MATH 4100 or MATH 7100, MATH 4140 or MATH 7140, and familiarity with software such as MATHEMATICA, MATLAB, or MAPLE

MATH 4570: Fluid Dynamics
Mathematical theory of fluid dynamics and applications. Prerequisites: MATH 2300
Credit Hours: 3

MATH 4580: Mathematical Modeling II
Solution of problems from industry, physical, social and life sciences, economics, and engineering using mathematical models. More general classes of problems than in Mathematics 4540 will be considered.
Credit Hours: 3
Prerequisites: 3 semesters of calculus and some exposure to ordinary differential equations or instructor's consent. MATH 4540 is not a prerequisite

MATH 4590: Mathematics of Financial Derivatives
Binomial and Black-Scholes pricing models. Option Greeks, delta and gamma hedging, market maker profit theory. Asian, barrier, compound gap and exchange options. Lognormal and Monte Carlo price simulation. Geometric Brownian Motion and Ito's Lemma. Interest rate models and volatility. Recommended: MATH 4355
Credit Hours: 3
Prerequisites: MATH 2300 and either STAT 2500 or STAT 4710 or MATH 4315

MATH 4700: Advanced Calculus of One Real Variable I
(cross-leveled with MATH 7700). Basic topology of the real line, numerical sequences and series, continuity, differentiability, Riemann integration, uniform convergence, power series.
Credit Hours: 3
Prerequisites: Grade of C- or higher in MATH 3000

MATH 4720: Advanced Calculus of One Real Variable II
Continuation of Advanced Calculus for functions of a single real variable. Topics include sequences and series of functions, power series and real analytic functions, Fourier series.
Credit Hours: 3
Prerequisites: Grade of C- or higher in MATH 3000

MATH 4900: Advanced Calculus for One Real Variable II
Continuation of Advanced Calculus for functions of a single real variable. Topics include sequences and series of functions, power series and real analytic functions, Fourier series.
Credit Hours: 3
Prerequisites: MATH 4700 or MATH 7700 or permission of the instructor

MATH 4900: Advanced Multivariable Calculus
(cross-leveled with MATH 7900). This is a course in calculus in several variables. The following is core material: Basic topology of n-dimensional Euclidian space; limits and continuity of functions; the derivative as a linear transformation; Taylor's formula with remainder; the Inverse and Implicit Function Theorems, change of coordinates; integration (including transformation of integrals under changes of coordinates); Green's Theorem. Additional material from the calculus of several variables may be included, such as Lagrange multipliers, differential forms, etc.
Credit Hours: 3
Prerequisites: MATH 4700
MATH 4920: Introduction to Abstract Linear Algebra
(cross-leveled with MATH 7920). Study of vector spaces over arbitrary fields: topics include linear maps on finite dimensional vector spaces, bilinear and multi-linear forms, invariant subspaces and canonical forms.

Credit Hours: 3
Prerequisites: Grade of C- or higher in MATH 4720

MATH 4940: Introduction to Complex Variables
Complex functions, contour integration, power series, residues and poles, conformal mapping.

Credit Hours: 3
Prerequisites: MATH 4110 or MATH 4700

MATH 4960: Special Readings in Mathematics
Credit Hour: 1-3
Prerequisites: Consent of Department required

MATH 4970: Senior Seminar in Mathematics
Seminar with student presentations, written projects, and problem solving. May be used for the capstone requirement.

Credit Hours: 3

MATH 4980: Mathematics Problem Solving
Creative advanced problem solving bringing together methods such as integration, probability and Euclidean geometry.

Credit Hours: 3
Prerequisites: MATH 4140 and another 4000 level Mathematics course, or instructor's consent

MATH 4996: Honors in Mathematics
Special work for senior B.A. Honors and B.S. Honors candidates.

Credit Hours: 2
Prerequisites: Consent of Department required

MATH 7001: Topics in Mathematics-General
Organized study of selected topics. Subjects and earnable credit may vary from semester to semester.

Credit Hour: 1-99
Prerequisites: graduate standing and MATH 2300 and instructor's consent. Departmental consent for repetition

MATH 7060: Connecting Geometry to Middle and Secondary Schools
(cross-leveled with MATH 4060). Euclidian foundations, basic concepts of symbolic logic, polyhedra, Euler Characteristic, congruence, area, Picks Theorem, volume, Cavalieri's Principles, surface area, similarity, reflections, translations, rotations, symmetry, vectors, general transformations, determinants, matrices, transformations using matrices, brief introduction to spherical geometry.

Credit Hours: 3
Prerequisites: MATH 1360 or MATH 1500, enrollment is restricted to Math Education majors

MATH 7070: Connecting Algebra to Middle and Secondary Schools
A detailed study of integer and rational arithmetic and algebra. Topics include: Binomial Theorem, induction, division algorithm, Euclid's Algorithm, Fundamental Theorem of Arithmetic, Pythagorian triples, modular arithmetic and generalizations to polynomials, matrices and other axiomatic structures. Prerequisites: MATH 1320, enrollment is restricted to Math Education majors

Credit Hours: 3

MATH 7080: Connect Calculus to Middle and Secondary Schools
Course topics include: sequences, series functions, limits, continuity, differentiation, optimization, curve sketching, antidifferentiation, area of plane regions, lengths of plane curves, areas of surfaces of revolution, and volumes of solids.

Credit Hours: 3
Prerequisites: MATH 1160, enrollment is restricted to Math Education majors

MATH 7100: Differential Equations
Traditional introductory course in ordinary differential equations. Includes 1st and 2nd order linear differential equations with numerous applications; Laplace transforms; power series solutions; numerical methods, linear systems.

Credit Hours: 3
Prerequisites: graduate standing and MATH 2300

MATH 7110: Advanced Calculus With Applications
Linear mappings, Jacobi matrices and determinants, change of variables, vector fields, line and surface integrals, theorems of Green, Gauss and Stokes, sequences and series of functions, uniform convergence, special functions.

Credit Hours: 3
Prerequisites: graduate standing and MATH 2300

MATH 7140: Matrix Theory
Basic properties of matrices, determinants, vector spaces, linear transformations, eigenvalues, eigenvectors, and Jordan normal forms. Introduction to writing proofs.

Credit Hours: 3
Prerequisites: graduate standing and one of MATH 2300, MATH 2320, MATH 2120 or MATH 2340

MATH 7150: History of Mathematics
This is a history course with mathematics as its subject. Includes topics in the history of mathematics from early civilizations onwards. The growth of mathematics, both as an abstract discipline and as a subject which interacts with others and with practical concerns, is explored. Pre- or Co-requisite: MATH 2300 or MATH 2340 and graduate standing.

Credit Hours: 3

MATH 7300: Numerical Analysis
Machine arithmetic, approximation and interpolation, numerical differentiation and integration, nonlinear equations, linear systems, differential equations, error analysis. Selected algorithms will be programmed for solution on computers.
MATH 7310: Numerical Linear Algebra
Solution of linear systems of equations by direct and iterative methods. Calculation of eigenvalues and eigenvectors of matrices. Selected algorithms programmed for solution on computers.
Credit Hours: 3
Prerequisites: MATH 2300 and MATH 4100 or equivalent

MATH 7315: Introduction to Mathematical Statistics
(same as STAT 7710). Introduction to theory of probability and statistics using concepts and methods of calculus.
Credit Hours: 3
Prerequisites: graduate standing and MATH 2300 or instructor's consent

MATH 7320: Introduction to Probability Theory
(same as STAT 7750). Probability spaces; random variables and their distributions; repeated trials; probability limit theorems.
Credit Hours: 3
Prerequisites: MATH 2300 or instructor's consent

MATH 7330: Theory of Numbers
Divisibility, factorization, arithmetic functions, means value theorems, distribution of prime numbers, congruences, primitive roots, character theory, Riemann zeta function, and Dirichlet L-functions.
Credit Hours: 3
Prerequisites: MATH 2300; recommended MATH 2320 or MATH 2340, and MATH 4940 or MATH 7940

MATH 7335: College Geometry
Euclidean geometry from an advanced viewpoint. Synthetic and coordinate methods will be used. The Euclidean group of transformations will be studied.
Credit Hours: 3
Prerequisites: graduate standing and MATH 2300

MATH 7340: Projective Geometry
Basic ideas and methods of projective geometry built around the concept of geometry as the study of invariants of a group. Extensive treatment of collineations.
Credit Hours: 3
Prerequisites: MATH 2300

MATH 7345: Foundations of Geometry
Coordination of affine, projective planes by means of various kinds of algebraic structures: planar ternary rings, Veblen-Wedderburn systems, divisions rings, skew fields, and fields.
Credit Hours: 3
Prerequisites: MATH 2300

MATH 7350: Introduction to Non-Euclidean Geometry
Account of rise, development of non-Euclidean geometries. Intensive study of plane hyperbolic geometry.
Credit Hours: 3
Prerequisites: MATH 2300

MATH 7355: Introduction to Financial Derivatives and Options
(cross-leveled with MATH 4355). Long and short positions, forward contracts, exchange traded index futures, European and American call and put options, put-call parity, trading and hedging strategies, synthetic transactions, arbitrage, currency options, fixed income portfolio management, duration, convexity, interest rate and currency swaps, embedded options.
Credit Hours: 3
Prerequisites: MATH 2300 and STAT 2500 or STAT 4710/ MATH 4315, or instructor's consent

MATH 7360: Actuarial Mathematics
(cross-leveled with MATH 4360). Basic actuarial methods, mathematical population studies and models of population growth. Compound interest and annuities certain. Values of endowment and annuities, calculation of premiums, surrender values. Stochastic models of populations growth.
Credit Hours: 3
Prerequisites: MATH 2300 and either STAT 2500 or STAT 4710/ MATH 4315, or instructor's consent

MATH 7370: Actuarial Modeling I
This course covers the main probability tools applied to financial risk modeling, and the financial mathematics concepts used in calculating present and accumulated values for various cash flows. It is a helpful tool in preparing for the Society of Actuaries exams P (Probability) and FM (Financial Mathematics), and it is oriented towards problem solving techniques illustrated with previous exam problems. Students are encouraged to take MATH 4355 prior to this course.
Credit Hours: 3
Prerequisites: MATH 2300, MATH 4320/ STAT 4750

MATH 7371: Actuarial Modeling II
(cross-leveled with MATH 4371). The goal of this course is to teach the basic theory of life contingent actuarial models and the application of those models to insurance and other financial risks. The topics covered are part of the readings for the Society of Actuaries exam MLC (Models for Life Contingencies) and are illustrated with past exam questions.
Credit Hours: 3
Prerequisites: MATH 4320 or STAT 4750, and MATH 4370

MATH 7400: Introduction to Topology
Topics from topology of Euclidean spaces, generalizations to metric spaces and topological spaces. Fundamentals of point set topology.
Credit Hours: 3
Prerequisites: MATH 2300
MATH 7500: Applied Analysis
Solution of the standard partial differential equations (wave, heat, Laplace's eq.) by separation of variables and transform methods; including eigenfunction expansions, Fourier and Laplace transform. Boundary value problems, Sturm-Liouville theory, orthogonality, Fourier, Bessel, and Legendre series, spherical harmonics.
Credit Hours: 3
Prerequisites: MATH 4100/ MATH 7100

MATH 7510: Higher Algebra
Introduction to rings, integral domains, fields, groups.
Credit Hours: 3
Prerequisites: MATH 2300 OR MATH 2320

MATH 7520: Statistical Inference I
(same as STAT 7760). Sampling; point estimation; sampling distribution; tests of hypotheses; regression and linear hypotheses.
Credit Hours: 3
Prerequisites: MATH 4320/ MATH 7320

MATH 7540: Mathematical Modeling I
Solution of problems from industry, physical, social and life sciences, economics, and engineering using mathematical models.
Credit Hours: 3
Prerequisites: graduate standing and 3 semesters of calculus and some exposure to ordinary differential equations or instructor's consent

MATH 7560: Nonlinear Dynamics, Chaos and Fractals
Conceptual introduction to nonlinear dynamics, bifurcation and stability of steady states, chaos in nonlinear differential equations and maps, fractal dimension, strange attractors, and applications to physical science.
Credit Hours: 3
Prerequisites: graduate standing and MATH 4100/ MATH 7100, MATH 4140/ MATH 7140, and familiarity with software such as MATHEMATICA, MATLAB, or MAPLE

MATH 7570: Fluid Dynamics and Geophysical Applications
Mathematical theory of fluid dynamics and applications to meteorology and oceanography.
Credit Hours: 3
Prerequisites: MATH 2300 and instructor's consent

MATH 7580: Mathematical Modeling II
Solution of problems from industry, physical, social and life sciences, economics, and engineering using mathematical models. More general classes of problems than in MATH 7540 will be considered.
Credit Hours: 3
Prerequisites: 3 semesters of calculus and some exposure to ordinary differential equations or instructor's consent.MATH 7540 is not a prerequisite

MATH 7590: Mathematics of Financial Derivatives
Credit Hours: 3
Prerequisites: MATH 2300 and either STAT 2500 or STAT 4710 or MATH 4315
Recommended: MATH 4355

MATH 7620: Differential Geometry I
Metric properties of restricted portions of curves and surfaces in three-dimensional Euclidean space.
Credit Hours: 3
Prerequisites: MATH 2300

MATH 7700: Advanced Calculus of One Real Variable I
(cross-leveled with MATH 4700). Series of real numbers, limits of functions, continuity and uniform continuity, differentiability, and Riemann integration.
Credit Hours: 3
Prerequisites: MATH 2300
Recommended: MATH 4140 and one other mathematics course number above MATH 2300

MATH 7720: Introduction to Abstract Algebra I
Basic properties of integers, fundamental theorem of arithmetic, introduction to groups, rings and fields.
Credit Hours: 3
Prerequisites: MATH 2300
Recommended: MATH 4140 and one other Mathematics course numbered above 2300

MATH 7740: Advanced Calculus of One Real Variable II
(cross-leveled with MATH 4800). Continuation of Advanced Calculus for functions of a single real variable. Topics include sequences and series of functions, power series and real analytic functions, Fourier series.
Credit Hours: 3
Prerequisites: MATH 4700 or MATH 7700 or permission of the instructor

MATH 7800: Advanced Calculus of One Real Variable III
(cross-leveled with MATH 4900). This is a course in calculus in several variables. The following is core material: Basic topology of n-dimensional Euclidean space; limits and continuity of functions; the derivative as a linear transformation; Taylor's formula with remainder; the Inverse and Implicit Function Theorems, change of coordinates; integration (including transformation of integrals under changes of coordinates); Green's Theorem. Additional material from the calculus of several variables may be included, such as Lagrange multipliers, differential forms, etc.
Credit Hours: 3
Prerequisites: MATH 4700/ MATH 7700

MATH 7900: Advanced Multivariable Calculus
(cross-leveled with MATH 4920). Study of vector spaces over arbitrary fields: topics include linear maps on finite dimensional vector spaces, bilinear and multi-linear forms, invariant subspaces and canonical forms.
Credit Hours: 3
Prerequisites: MATH 2300

MATH 7940: Introduction to Complex Variables
Complex functions, contour integration, power series, residues and poles, conformal mapping.
Credit Hours: 3
Prerequisites: MATH 4110/ MATH 7110 OR MATH 4700/ MATH 7700

MATH 7960: Special Readings in Mathematics
Credit Hour: 1-3
Prerequisites: MATH 2300 and instructor's consent

MATH 7970: Senior Seminar in Mathematics
Seminar with student presentations, written projects, and problem solving. May be used for the capstone requirement.
Credit Hours: 3
Prerequisites: 12 hours of mathematics courses numbered 4000 or above

MATH 7980: Mathematics Problem Solving
Creative advanced problem solving bringing together methods such as integration, probability and Euclidean geometry.
Credit Hours: 3
Prerequisites: MATH 4140 and another 4000 level Mathematics course, or instructor's consent

MATH 8085: Problems in Mathematics
Problems in Mathematics
Credit Hours: 3

MATH 8090: Master's Thesis Research in Mathematics
Students will be required to complete an independent project. Topics are chosen in consultation with a faculty advisor and are subject to departmental consent. Graded on S/U basis only.
Credit Hours: 3
Prerequisites: MATH 4720 and MATH 4920, or equivalent
Corequisites: MATH 8220 and MATH 8250

MATH 8102: Topics in Algebra
Advanced topics in algebra.
Credit Hours: 3
Prerequisites: MATH 8410

MATH 8190: Masters Project in Mathematics
Masters Project in Mathematics
Credit Hours: 3

MATH 8202: Topics in Functional Analysis
Topics in Functional Analysis
Credit Hours: 3

MATH 8210: Basic Algebra
Accelerated problem solving course in linear and abstract algebra. Will prepare students for the algebra qualifying exam.
Credit Hours: 3
Prerequisites: MATH 4720, MATH 4920, or instructor's consent, or equivalent

MATH 8220: Basic Analysis
Accelerated problem-solving course in advanced calculus and complex analysis. Will prepare students for the analysis qualifying exam.
Credit Hours: 6
Prerequisites: MATH 4700, MATH 4900, MATH 4940, instructor's consent or equivalent

MATH 8250: Basic Topology and Geometry
Credit Hours: 3
Prerequisites: MATH 4700, MATH 4900, MATH 4140, or instructor's consent, or equivalent
Corequisites: MATH 8210 and MATH 8220

MATH 8302: Topics in Harmonic Analysis
Topics in Harmonic Analysis
Credit Hours: 3

MATH 8402: Topics in Mathematical Physics
Topics in Mathematical Physics
Credit Hours: 3

MATH 8410: Algebra I
Theory of algebraic structures--groups, rings, fields, algebraic and transcendental extensions of fields.
Credit Hours: 3
Prerequisites: MATH 4720 and MATH 4920, or equivalent

MATH 8411: Algebra II
Theory of modules, Galois theory and additional topics to be selected by the instructor.
Credit Hours: 3
Prerequisites: MATH 4720 and MATH 4920, or equivalent

MATH 8420: Theory of Functions of Real Variables I
Properties of functions of one real variable. Lebesgue measure and integration on the line.
Credit Hours: 3
Prerequisites: MATH 4700 or MATH 7700 and MATH 4900 or MATH 7900, or equivalent

MATH 8421: Theory of Functions of Real Variables II
Continuation of MATH 8420. General measure and integration theory. Elements of the theory of Hilbert and Banach spaces, linear functions and linear operators.
Credit Hours: 3
Prerequisites: MATH 8420
