Medicine-Interdisciplinary (MED_ID)

MED_ID 5041: Structure and Function of the Human Body I
Biochemical principles, cell biology, human development, histology and gross anatomy with clinical correlates utilizing patient examples and non-invasive techniques.
Credit Hours: 6

MED_ID 5042: Interviewing
Development of skills needed to obtain a history of the patient's present illness, past medical history and other pertinent background information. Vitally important to medical practice, these skills are role modeled, practiced and assessed with detailed feedback. Additional emphasis is placed on the doctor-patient relationship, ethics and the role of the physician as a therapeutic agent.
Credit Hours: 3

MED_ID 5043: Structure and Function of the Human Body II
Study of the structure and function of the body’s metabolic, nervous and muscular systems.
Credit Hours: 6

MED_ID 5044: Physical Examination
Introduction to the doctor-patient relationship and systematic physical examination of the patient. Certification in basic life support is also included.
Credit Hours: 3

MED_ID 5045: Structure and Function of the Human Body III
Study of the structure and function of the body's cardiovascular, gastrointestinal, and urinary systems.
Credit Hours: 6

MED_ID 5046: Psychosocial Aspects of Medicine
A brief study of the history of medicine and the impact of key events on current medical practice. Study of the biopsychosocial model, biomedical ethics and specific psychosocial problems encountered by physicians such as compliance, problems based in human sexuality, substance abuse and death and dying.
Credit Hours: 3

MED_ID 5047: Structure and Functions of the Human Body IV
Study of the structure and function of the endocrine, reproductive, vascular systems. The classification of pathogenic and non-pathogenic organisms, mechanisms of infection, the immune response and the interaction between pharmacologic agents and exogenous organisms.
Credit Hours: 6

MED_ID 5048: Clinical Epidemiology and Preventive Medicine
Application of clinical epidemiology to understanding measurement of population characteristics and to the critical analysis of the literature through analysis of study designs and interpretation of the results and causal relationships. Study of prevention, screening and health maintenance as important aspects of health care.
Credit Hours: 3

MED_ID 5750: Contemplating Medicine, Patients, Self and Society  
The purpose of the longitudinal COMPASS course is to foster the development of patient-centered physicians in relation to patients, self and society. This is accomplished through an innovative longitudinal small group experience using a variety of learning methods including group discussion, reflective writing, storytelling, reading and case problem solving. The small group membership includes students from each of the 4 medical school classes and 2 faculty Guides. Curricular themes and small group session titles for the 4 year course recur on a two year cycle. The content and focus of each session is unique. Students in the first, second and third years of medical school will receive a final course grade (satisfactory or unsatisfactory) at the end of their M4 year. The final course grade will reflect the student's performance in the small group sessions and performance on the capstone assignment.  
Credit Hour: 1-5

MED_ID 5850: Remediation of MED_ID 5850  
Medical Students who receive an unsatisfactory grade in MED_ID 5850 Contemplating Medicine, Patients, Self and Society will enroll for this course in order to remediate their grade.  
Credit Hours: 3  
Prerequisites: MED_ID 5850
MED_ID 6030: SCC Advanced Biomedical Sciences Elective
Students will work under the supervision of an MU faculty member at MU's Springfield Clinical Campus in a pre-approved learning experience. Activities that fulfill this requirement may include, but are not limited to: Anatomy dissection at Missouri State University (MSU), research project at a Springfield based clinical location or lab (Cox, Mercy, MSU), PBL case writing, and cross cultural medicine (global health study abroad). ABS elective content and requirements will be similar to those offered at MU's Columbia Clinical Campus.

Credit Hours: 5

MED_ID 6031: SCC Advanced Clinical Selective
Students will work under the supervision of a faculty preceptor at the Springfield Clinical Campus. Students will see patients in the outpatient clinic and/or inpatient hospital setting, perform a history and exam, and develop a patient-centered assessment and plan. They will then discuss their findings, assessment and plan with the faculty preceptor and go see the patient together. The student will complete oral patient presentations and document patient encounters in the medical record as directed by the faculty preceptor. Students will enhance their knowledge, skills, and attitudes about patient-centered care through active participation in direct patient care activities while under the supervision of a faculty preceptor. Students will integrate previously acquired knowledge and concepts and apply them to the care and management of patients.

Credit Hours: 5

MED_ID 6032: SCC General Elective
Students will work under the supervision of a faculty preceptor at the Springfield Clinical Campus. Students will see patients in the outpatient clinic and/or inpatient hospital setting, perform a history and exam, and develop a patient-centered assessment and plan. They will then discuss their findings, assessment and plan with the faculty preceptor and go see the patient together. The student will complete oral patient presentations and document patient encounters in the medical record as directed by the faculty preceptor. Students will enhance their knowledge, skills, and attitudes about patient-centered care through active participation in direct patient care activities while under the supervision of a faculty preceptor. Students will integrate previously acquired knowledge and concepts and apply them to the care and management of patients.

MED_ID 6244: ABS Quality Improvement and Patient Safety Elective
The 4th year student will work with leaders in the Office of Clinical Effectiveness to identify an improvement project to be conducted during the elective. Students will have self-paced readings/didactic expectations, and will be expected to review and report on medical literature relevant to the care process(es) targeted for improvement. To complete their project, the student will present the improvement work to patient safety and quality improvement leaders, as well as stakeholders in the care process(es) identified for improvement efforts.

Credit Hours: 5

MED_ID 6390: ABS Individualized Study in Medicine-M1
Goals/Objectives: Participate in PBL as a tutor under the guidance of an experienced faculty tutor. Review the literature appropriate to each case. Update one PBL case that is used in the course of the block OR update a problem solving exam OR write a new problem solving exam. Students must submit the case or exam electronically to the course coordinator. Evaluation: Student's performance as tutor will be evaluated by the supervising faculty member and the tutor group members. Notes: During a four-week block, the fourth year student will tutor an M-1 PBL group (Monday, Wednesday, & Friday mornings) under the supervision of a senior faculty member. Contact course coordinator for case update details. Submission date for case update is set two weeks after the tutoring session ends. The student will attend all tutor preparation meetings and prepare for PBL through reading, self-directed study and discussions with faculty. Complete student mid-block and end-of-block evaluation as directed.

Credit Hours: 5

Prerequisites: M4s registering for PBL tutoring must be in good standing and not on probation. M4s must not have come before the CSP for an automatic vote for dismissal

MED_ID 6691: Elective Individual Study in Medicine - M2
Goals/Objectives: Participate in PBL as a tutor under the guidance of an experienced faculty tutor. Evaluations: the student's performance as tutor will be evaluated by the supervising faculty member and the tutor group members. Notes: During the four-week block, the fourth year student will tutor a M-2 PBL group (Tuesday and Thursday afternoons) under the supervision of a senior faculty member.
Credit Hours: 5
Prerequisites: M4s registering for PBL tutoring must be in good standing and not on probation. M4s must not have come before the CSP for an automatic vote for dismissal.

MED_ID 6692: Case/Exam Writing Elective
The fourth year medical student will work as part of a team in order to develop learning materials for the first and second year students. Students will work closely with faculty advisors and clinical mentors to develop educationally sound learning materials. Under the guidance of faculty preceptors, medical students will author one original PBL case including a comprehensive tutor guide and multiple choice examination questions covering the case objectives, AND one original Clinical Reasoning Exam including an annotated key.
Credit Hours: 5
Prerequisites: fourth year medical student in good standing

MED_ID 6693: Simulation Preparation for Internship
This course is meant to increase the medical students' knowledge and skillbase in preparation for the first year of internship. In order to accomplish this, the students will be exposed to a variety situations common to first year residents through activities created with simulation. Throughout the course, students will demonstrate how to provide effective and efficient patient-centered care, while improving their communication skills and professionalism with patients and other healthcare providers. Students will understand the role of simulation in medical education and develop skills in debriefing of scenarios throughout the course. At the end of the course, students will be expected to complete a simulation capstone project. Prerequisites: Class level: 4th year medical student. Approval by Simulation Director and Completion of all Core Clerkship Requirements.
Credit Hours: 5

MED_ID 6695: Rural Track Clinical Elective
Students will enhance their knowledge, skills, and attitudes about patient-centered care through active participation in direct patient care activities while under the supervision of a faculty preceptor. Students will integrate previously acquired knowledge and concepts and apply them to the care and management of patients.
Credit Hours: 2
Prerequisites: successful completion of the first two years of medical school

MED_ID 6696: Springfield Clinical Campus Elective
Students will work under the supervision of a faculty preceptor at the Springfield Clinical Campus. Students will see patients in the outpatient clinic and/or inpatient hospital setting, perform a history and exam, and develop a patient-centered assessment and plan. They will then discuss their findings, assessment and plan with the faculty preceptor and go see the patient together. The student will complete oral patient presentations and document patient encounters in the medical record as directed by the faculty preceptor.
Credit Hours: 2
Prerequisites: successful completion of the first two years of medical school

MED_ID 6924: Rural Track Clinical Elective
Students will enhance their knowledge, skills, and attitudes about patient-centered care through active participation in direct patient care activities while under the supervision of a faculty preceptor. Students will integrate previously acquired knowledge and concepts and apply them to the care and management of patients.
Credit Hours: 2
Prerequisites: successful completion of the first two years of medical school

MED_ID 6933: Joint Commission Tracers: Assessing Quality Patient Care Using Joint Commission Criteria
Quality patient care is the core of the academic medical center's mission, accomplished through exemplary education, research, and clinical care. In order to assure that patients receive quality care, the Center for Medicare and Medicaid Services (CMS) requires that health care organizations demonstrate quality through a process of accreditation, which has been delegated to The Joint Commission (TJC), an independent, non-for-profit organization. TJC promotes the continuous improvement of health care by evaluating organizations and "inspiring them to excel in providing safe and effective care of the highest quality and value." Failure of a health system to meet TJC requirements can result in loss of an organization's ability to participate in Medicare/ Medicaid programs, which has a crippling effect on delivering patient care. Tracers are the tool TJC utilizes to evaluate the quality of patient care in an organization. During the two-week course, the student will: 1) attend tracer orientation. 2) conduct ten tracers (approximately 1 hour each) in inpatient and invasive procedure areas. 3) conduct a literature search on tracers and quality care, and prepare 3 to 4 page synthesis. 4) complete a pre- and post- survey on the tracer process. 5) complete a one-page written reflection of the student's tracer experience at the end of each week.
Credit Hours: 2
Prerequisites: successful completion of the first two years of medical school
MED_ID 6934: Sexual and Gender Minority Health Issues Across the Lifecourse
The purpose of this course is to increase student's familiarity with sexual and gender minority health issues likely to be seen in practice. Integral to the course structure is improved cultural competency in not only appropriate language and terms used within the community but also a sense of the social-cultural issues each generation has faced growing up in America.

Credit Hours: 2
Prerequisites: successful completion of the first two years of medical school
