# Radiology (RADIOL)

## RADIOL 4328: Introductory Radiation Biology
(same as BIO_SC 4328, NU_ENG 4328, V_M_S 7328). Concepts of ionizing radiations, their actions on matter through effects on simple chemical systems, biological molecules, cell, organisms, man.

**Credit Hours:** 3  
**Prerequisites:** junior standing Sciences/Engineering; one course in Biological Sciences and Physics/Chemistry; or instructor's consent

## RADIOL 6044: SCC Radiation Oncology Elective
Students will enhance their knowledge, skills, and attitudes about patient-centered care through active participation in direct patient care activities while under the supervision of a faculty preceptor. Students will integrate previously acquired knowledge and concepts and apply them to the care and management of patients. During the elective, students will be expected to work-up patients, perform physical exams, and present cases to faculty. Students will also be exposed to treatment planning, simulations, and treatment deliveries throughout the rotation. At the end of the elective, students will be expected to give a 10-minute presentation on a topic of their choosing.

**Credit Hours:** 5  
**Prerequisites:** Successful completion of the first two years of medical school

## RADIOL 6373: ABS Radiology Research
ABS Radiology Research

**Credit Hour:** 5-10

## RADIOL 6645: Radiology
Goals/Objectives: General survey of all subspecialties of radiology.  
Evaluations: Written evaluations performed by both faculty and residents.

**Credit Hours:** 5

## RADIOL 6646: SCC Radiology Elective
Students on this elective rotate through the various areas of radiology, spending time in each of the following subspecialties: musculoskeletal, ultrasound/mammography, chest/body imaging, neuroradiology (CT/MRI), pediatric imaging, and/or Interventional Radiology. Students participate in workstation rounds. Information is presented using a variety of evidence-based resources and online modules, including case conferences, daily mini-lectures, and case review websites.

**Credit Hours:** 5  
**Prerequisites:** Successful completion of the first two years of medical school; faculty approval

## RADIOL 6650: Advanced Radiology
Advanced Radiology

**Credit Hours:** 5

## RADIOL 6745: Radiology - Rural
Radiology - Rural

**Credit Hours:** 5

## RADIOL 6931: Introduction to Radiology
This two week elective will provide students with exposure to chest and body imaging (1 week per area). They will participate in 2-3 didactic sessions focused on the basics of radiology and imaging that is important to all fields of medicine, as well as video lectures one day a week along with the upperclassmen that are doing their 4 week elective at that time. Videos present a case based learning plan involving common emergent situations that may be encountered during their clinical training.

**Credit Hours:** 2  
**Prerequisites:** Successful completion of the first two years of medical school

## RADIOL 6952: SCC Radiation Oncology 2 week elective
This course is intended as an introductory experience in the field of Radiation Oncology. Students will enhance their knowledge, skills, and attitudes about patient-centered care through active participation in direct patient care activities while under the supervision of a faculty preceptor. Students will integrate previously acquired knowledge and concepts and apply them to the care and management of patients. During the clerkship, students will be expected to work-up patients, perform physical exams, and present cases to faculty. Students will also be exposed to treatment planning, simulations, and treatment deliveries throughout the rotation.

**Credit Hours:** 2  
**Prerequisites:** Successful completion of the first two years of medical school

## RADIOL 6961: Radiation Oncology-2-Week Elective
This will be an introduction of radiation oncology including the basics of radiation physics, radiation biology, and treatment planning. Each student will be asked to attend multidisciplinary tumor conference. They will participate in evaluation and management of patients with cancer. This will include seeing consults, participating in treatment planning, seeing patients who are on treatment, and follow-up of patients. Special procedures include radiation oncology three-dimensional treatment planning, INRT, stereotactic radiosurgery and stereotactic body radiation therapy, and brachytherapy.

**Credit Hours:** 2  
**Prerequisites:** Successful completion of the first two years of medical school

## RADIOL 6962: SCC Introduction to Radiology
This two week elective will provide students with exposure to Chest, Body Imaging, Neuroradiology and Pediatric Imaging. Information is presented in a variety of evidence-based resources and online modules, including daily discussion and case review.

**Credit Hours:** 2  
**Prerequisites:** Successful completion of the first two years of medical school
