Credit Hours: 3
Prerequisites: Previous introductory course in qualitative research methods is required

LTC 8951: Grounded Theory and Situated Inquiry
For qualitative researchers attempting to understand social processes, Grounded Theory (GT) offers a way of developing theory empirically, 'from the bottom up.' In fact, this is what most distinguishes GT from other methods. It is explicitly emergent. It does not test a hypothesis.
It provides useful tools to learn about participants' understandings and experiences of a social issue, process, or phenomena and to discover and construct theory to account for the social processes being studied. In this course, we will consider the theoretical underpinnings and practices of classic and contemporary GT methodologies. Importantly, we will conduct research and a GT analysis of data.

The purpose of this course is to expose students, in various disciplines, to poststructural theory and provide space to "have a try" at thinking with theory for data analysis. This course provides space for students to read poststructural scholars' original writings. Readings for the course also allow students to read secondary sources and research studies that apply poststructural ideas. Students are encouraged to think of ways that poststructural theory can become a methodology and/or method for research in their discipline.

The purpose of the longitudinal COMPASS course is to foster the development of patient-centered physicians in relation to patients, self and society. This is accomplished through an innovative longitudinal small group experience using a variety of learning methods including group discussion, reflective writing, storytelling, reading and case problem solving. The small group membership includes students from each of the 4 medical school classes and 2 faculty Guides. Curricular themes and small group session titles for the 4 year course recur on a two year cycle. The content and focus of each session is unique. Students in the first, second and third years of medical school will receive a final course grade (satisfactory or unsatisfactory) at the end of their M4 year. The final course grade will reflect the student's performance in the small group sessions and performance on the capstone assignment.

**MED_ID 6933: Joint Commission Tracers: Assessing Quality Patient Care Using Joint Commission Criteria**  
Quality patient care is the core of the academic medical center's mission, accomplished through exemplary education, research, and clinical care. In order to assure that patients receive quality care, the Center for Medicare and Medicaid Services (CMS) requires that health care organizations demonstrate quality through a process of accreditation, which has been delegated to The Joint Commission (TJC), an independent, non-for-profit organization. TJC promotes the continuous improvement of health care by evaluating organizations and "inspiring them to excel in providing safe and effective care of the highest quality and value." Failure of a health system to meet TJC requirements can result in loss of an organization's ability to participate in Medicare/ Medicaid programs, which has a crippling effect on delivering patient care. Tracers are the tool TJC utilizes to evaluate the quality of patient care in an organization. During the two-week course, the student will: 1) attend tracer orientation. 2) conduct ten tracers (approximately 1 hour each) in inpatient and invasive procedure areas. 3) conduct a literature search on tracers and quality care, and prepare 3 to 4 page synthesis. 4) complete a pre- and post-survey on the tracer process. 5) complete a one-page written reflection of the student's tracer experience at the end of each week.

PEA_ST 3330: Environmental Justice
(same as SOCIOL 3330). Environmental justice refers to the ways in which the "cost and benefits" of modern industrial society are distributed among social groups. This course is concerned with justice, not as an abstract concept, and inequality not in terms of numbers in a bank account. Social justice or inequality are lived, embodied experiences. An individual's likelihood of experiencing environmental harm is related to intersecting gender, race and class formations, among other things. Justice or inequality is not only embodied, it also happens in places--national and regional differences matter. In this course we will look at some of the extensive literature documenting the ways in which communities of color and poor communities are subject to disproportionate environmental risks. In addition, we will focus on gender as an important category in understanding environmental inequality. Graded on A-F basis only.

PHYSCS 2500: The Beautiful Invisible: Exploring Physics, Fiction, and Reality
This course explores the conceptual structure of modern physics from a humanistic perspective. Rather than describing the natural world "as it is", physical science weaves some key observations in a convincing and memorable narrative. It is not within its power to explain reality, but it can make it understandable, sometimes even predictable. Due to the presence of internal and external constraints, physical theories are akin to myths, i.e., fiction created by many authors over an extended period of time. The mythical character of a theory does not diminish its scientific validity - quite the contrary. Convincing myths are not easily found and better observations demand better myths. The mythical content of the theory is not some extraneous content that we introduce for the sake of popularization, but an essential part of the science itself.

This course demonstrates that truly understanding the American constitutional and democratic traditions begins with acknowledging and studying how, in framing the Constitution and in imagining the new nation, the Founders drew on the work and cobbled together the ideas of thinkers from multiple eras and continents and, moreover, thinkers of vastly different political ideologies and disciplinary expertise.  
**Credit Hours: 3**

**POL_SC 2455: Constitutional Debates**  
While we will make reference to the work of canonical political thinkers from the Western tradition during the semester--and while we will also, at times, take a broadly philosophical approach to describing certain of the Founders' theses on governance--this is not a course in "high theory." Instead, our examination of the process of drafting and ratifying the United States Constitution will be more pragmatic in nature, focusing on the practical problems and questions concerning national governance that shaped the final design of the Constitution. At the same time, this description of the class as one that addresses the Constitution in terms of the practical problems that the Founders saw it solving drastically understates the complexity and contentiousness of the subject matter that we will be examining. Specifically, the readings for the course will allow us to identify the ways in which, and reasons for which, the Founders disagreed not only on how to solve the problems of governance that the nation faced in 1787 but, moreover, on what these problems actually were. With regard to this task of understanding the principles underlying the heated debates that arose during the drafting and ratification process, it should be noted that this is not a class in Framers-worship. While we will discuss why the Federalists ultimately "won the day," we will also devote significant attention to how the Anti-Federalists both profoundly influenced how we understand constitutional democracy in the United States and provided an intellectual lineage that still informs contemporary political debate. We will, that is, give each side their due. In addition, we will conclude the semester by considering the Constitution's post-ratification history, looking at a handful of Supreme Court decisions and constitutional amendments in order to think about some of the questions that the 1787 Constitution left un-answered and some of the problems that it left un-solved.

Off in the quiet corners of the policy process, public servants distribute public benefits, write rules that have the force of law, adjudicate conflicts and selectively enforce the law. Frequently the government delegates these tasks to non-profit organizations. These public and quasi-public administrative organizations play, therefore, a critical role in the politics of who gets what, when and how - the essential question of public policy. Administrative organizations in the United States play this powerful role, however, within a constitutional democracy. What caused this situation? And, moreover, what can be done to fix it? This course focuses on the social scientific study of human rights. We will focus on scientific explanations of the rise of the human rights movement, political and economic explanations for human rights conditions, and the effects of advocacy efforts concerning human rights. After this class, you will have not only an understanding of the major players and factors influencing human rights, but a base understanding of the social scientific processes which govern human rights conditions and improvements. As such, this class is not a history class or a class on current events. Though current and historical events will be discussed, your grade will not depend on your rote memorization of these events. Instead, the focus will be on understanding the underlying interests of important actors towards human rights, the arenas in which these actors interact, and the rules which govern their interactions. This focus on the basic principles will provide you with a rich practical knowledge of human rights. At the conclusion of the course, you will be able to actively engage with the global human rights community.

P_HLTH 8280: Biosafety and Laboratory Issues in Public Health
This course is designed to provide current worldwide guidance on laboratory issues & bio-safety with respect to conducting field epidemiology. This integration has recently been given media exposure with recent outbreaks of infectious disease, food-borne illnesses in the food supply, & also recently in Hollywood filmography (see Contagion, 2011 & Outbreak, 1995). While bio-safety, epidemiology, & laboratory medicine are disciplines that are closely interrelated, they are not always optimally connected on functional & organizational levels. This course will provide an overview of the field of biological safety (shorthand to 'bio-safety') & its application to epidemiology & laboratory medicine for the control biological hazards for students at all levels who are interested in the epidemiology of microbial diseases. Students will review biological hazards associated with occupational laboratory acquired infections,
& examine select case studies to identify critical bio-safety lapses & outbreak scenarios of food borne illness using epidemiological tools. The course will teach participants how to perform a comprehensive qualitative risk assessment for the use bio-hazards in the laboratory & learn how to employ the control strategies to appropriately manage these risks for field epidemiology. This course will also convey the laboratory perspective of public health investigations to field epidemiologists in order to improve collaboration between these disciplines & to enhance the quality of field investigations as well as day-to-day interaction. Course concepts can be applied to the control of bio-hazards during the review of proposed research involving bio-hazards, along with emphasizing protective measures when addressing incidents involving bio-hazards, such as emergency spills or bio-terrorism related events. In addition, coverage of the Select Agent Program & the additional security practices entailed with research will be covered. Graded on A-F basis only.

**REL_ST 2220: Death and Dying in the Western World**  
Death is a topic most Americans wish to avoid. Once we were very familiar with it since people before the mid-19th c. usually died at home, their bodies mourned at home, and then buried either in a designated public space or on their property (especially in the South). Today, most people die in hospitals or medical-oriented institutions (like nursing homes). Because death is so hidden (even disguised) most of us have never seen a dead body except in film or on television and those bodies are often a result of an exceptionally gruesome, yet highly staged death. Hidden death in everyday life has led to the fact that most Americans are unfamiliar with death and even outright afraid of it. People unconsciously treat death, the process of dying, and grief as a sort of infectious disease. However, death surrounds us both personally and collectively and this means that the living and the dead do not exist (and have never existed) in completely separate realms. This class explores how death has historically been approached in the Western world and familiarizes us with different types of death (natural death, death by execution, death from illness, and death by murder). Using a religious studies and American studies approach we will examine overarching themes of grief, loss, mourning, and even anger in association with death and dying.

<td>RUSS 3390</td>
<td>True Fictions: Russian Prose since 1900</td>
<td>Survey of Russian prose fiction of the twentieth and early twenty-first century. ANTHRO 3340: The Evolution of Human Nature
(same as ANTHRO 3340H, ANTHRO 3340HW, GN_HON 3241H). We will investigate the topic of human nature, asking such questions as: What are we like? Why do we behave the way we do? Are we inherently selfish or social? Do we have a unitary "self" or are we made up of many (and sometimes contradictory) selves? Is there a single "human" nature or are there distinct "male" and "female" natures? Does human nature vary across cultures? Insights come from fields ranging from genetics to literature. The concept of "human nature" is fiercely contested and debated both within and between academic disciplines. We will be focusing on the scientific study of human nature, seeking naturalistic explanations by formulating and testing hypotheses. In particular, we will use evolutionary theory to unify explanations from disparate disciplines like biology, psychology, and anthropology. In each class, we will discuss one specific topic like sex or violence and seek to make sense of it from both the proximate level (what triggers the behavior and how does it develop?) and the ultimate level (why and how did our evolutionary history imbue us with the capacity?). Graded on A-F basis only.

This course explores European Art from approximately 1710 to 1770, focusing on art associated with two different social sectors: The early modern aristocratic court culture whose artistic predilections had formed the European norm, and the increasingly powerful merchant classes whose newfound wealth enabled new artistic genres and styles to proliferate. Our inquiry begins with an exploration of the rococo as an ornamental style; we examine its origins in Italian garden architecture and subsequent transformation into a decoration for both French palatial interiors and German Churches. We then launch a succession of case studies of important artists, media, and objects in order to assess the varied ways that diverse social identities were deflected through the periods’ art an architecture. Students will pursue a research topic on rococo art for their semester project.
