Biomedical Sciences

The study of biomedical sciences includes the major disciplines of:

- anatomy (gross or microscopic)
- physiology/pharmacology (molecular, cellular and integrative)
- biochemistry/molecular biology
- endocrinology
- toxicology

Specific areas of interest are exercise biology including cardiac, vascular and muscle biology; cardiovascular biology including neuroendocrine regulation; membrane transport biology including cystic fibrosis and cardiac disease; and reproductive biology including environmental estrogen toxicities and developmental processes.

All of the biomedical sciences degrees at MU are at the graduate level, and within two very distinct programs. See the Graduate tab for details on these options.

For undergraduate students interested in studying biomedical sciences, there are more than two dozen courses taught at the undergraduate level. See the Courses tab for details on these options.

Faculty

Comparative (Veterinary) Medicine

Professor C. L. Franklin
Associate Professor Y. Agca, E. C. Bryda
Clinical Associate Professor L. W. Dixon
Adjunct Professor C. L. Besch-Williford
Adjunct Clinical Associate Professor R. S. Livingston
Clinical Veterinarian S. W. Korte, E. K. O’Connor

Pathobiology Emphasis

Clinical Associate Professor L. Berent*, D. Kim*, T. Reilly**, C. Vogelweid*, M. Whitney*

Associate Research Professor M. Lorson*, A. Ray*

Professor Emeritus C. A. Carson
R. Phillip and Diane Acuff Endowed Professor D. Pintel
McKee Endowed Professor G. Stewart**

Biomedical Sciences: Veterinary Medicine and Surgery emphasis

Assistant Professor S. M. Axiah*, A. Bukoshi**, A. E. DeClue**, M. Heller*, P. Pilhua*, F. Winingger* 

Clinical Assistant Professor K. R. Branson*
Teaching Professor I. Masseau
Assistant Teaching Professor L. Britt*, C. R Cook*, D. Nagy*, J. Pearce*, S. Reed*
Associate Teaching Professor M. Kerl*, J. Kramer*, L. Schultz*, K. A. Seling*
Assistant Extension Professor S. Poock*

Biomedical Sciences

Associate Professor C. S. Reddy**, C. S. Rosenfeld**, L. J. Rubin**, W. V. Welshons*
Assistant Professor C. P. Baines**, K. Cummings**, C. Emter**, D. D. Kline**

Adjunct Professor M. B. Brown*, V. H. Huxley, S. S. Segal**
Adjunct Assistant Professor T. Boyd

Adjunct Associate Professor G. S. Johnson*, G. E. Rottinghaus*
Clinical Associate Professor I. A. Constantinescu, B. L. Frappier*
Assistant Teaching Professor D. Cross, M. C. Kuehl-Kovarik**
Research Professor S. Yang**

* Graduate Faculty Member - membership is required to teach graduate-level courses, chair master's thesis committees, and serve on doctoral examination and dissertation committees.
** Doctoral Faculty Member - membership is required to chair doctoral examination or dissertation committees. Graduate faculty membership is a prerequisite for Doctoral faculty membership.

Undergraduate

While MU does not offer undergraduate degrees specifically in biomedical sciences, the University does offer baccalaureate opportunities in a number of related areas in the other Schools and Colleges that make up the University. The catalog provides a complete list of these degree options (http://catalog.missouri.edu/degreesanddegreeprograms).

Graduate

Biomedical Sciences Area Program Degrees

- MS in Biomedical Sciences with emphasis in Biomedical Sciences (http://catalog.missouri.edu/undergraduategraduate/interdisciplinaryacademicprograms/biomedicalsciences/ms-biomedical-sciences)
Biomedical Sciences

The University of Missouri offers several degree program options in Biomedical Sciences:

- **The Biomedical Sciences Area Program** offers a master’s program in basic biomedical sciences and a PhD area program. Dual biomedical-DVM degrees are other options. Students in the Biomedical Sciences Area Program do not have to be enrolled in the College of Veterinary Medicine.

- The Graduate School also confers three MS degrees related to veterinary biomedical sciences. Available emphasis areas are (a) comparative veterinary medicine, (b) pathobiology and (c) veterinary medicine and surgery. Generally, applicants to these biomedical degree programs are concurrently enrolled in College of Veterinary Medicine or have previously earned a Doctorate in Veterinary Medicine (DVM).

**Additional Program Options**

**Pathobiology**

The Pathobiology Area Program offers a PhD in Pathobiology.

**DVM/Graduate degree in Biomedical Sciences**

The Biomedical Sciences graduate programs enable veterinary medical students to pursue studies in the basic biomedical discipline of their choice for a PhD or MS degree while enrolled in the College of Veterinary Medicine. The program is designed to prepare students for advanced professional careers in universities and colleges, research institutes and industrial research.

With consent of the student’s graduate program committee, courses from the professional curriculum (which includes a major portion of the core curriculum) can be accepted toward the graduate degree.

**Master of Science:** The MS/DVM program enables veterinary medical students to complete a master’s degree while enrolled in the College of Veterinary Medicine. The program allows qualified students to seek in-depth involvement in the basic biomedical discipline of their choice. Six hours of 9090 Research that result in an original thesis are required. Financial support may be provided to VM2-4 students through teaching assistantships in gross anatomy laboratory (V_BSCI 5500 Veterinary Anatomy with Laboratory).

**Doctor of Philosophy:** The PhD/DVM program requires a minimum of 30 credit hours of 9090 Research culminating in completion of original research and defense of a written dissertation.

Major biomedical disciplines include anatomy of domestic species (gross or microscopic); physiology/pharmacology (molecular, cellular and integrative); biochemistry/molecular biology; endocrinology; and toxicology. Specific areas of interest are exercise sciences; cardiovascular and neuroscience; muscle biology; membrane transport biology; reproductive biology; and developmental toxicology.

**Admission Contact Information**

**BIOMED 1010: Biomedical Career Explorations**

An introduction to the variety of career possibilities within the growing field of biomedical sciences. Graded on S/U basis only.

**Credit Hour:** 1

**BIOMED 2001: Topics in Veterinary Biomedical Science**

May be repeated 2 times for credit. Graded on A-F basis only.

**Prerequisites:** instructor's consent

**Credit Hour:** 1-99

**BIOMED 2085: Problems in Biomedical Research**

Assignment of special Topics for Research training in biomedical research.

**Credit Hour:** 1-99

**Prerequisites:** instructor's consent

**BIOMED 2110: Biomedical Terminology**

Life science etymology (Greek for “true meaning”, means the study of word derivation) taught by classroom presentation and discussion. The course organization is based primarily on common themes of Greek and Latin terms along with historical reasons for current usage. The application of these terms is for all biomedical sciences and life sciences. Graded on A-F basis only.

**Credit Hours:** 3

**BIOMED 2111: Veterinary Medical Terminology**

Veterinary Medical Terminology is an extension of Biomedical Sciences 2110, Biomedical Terminology. The course organization is lecture, based
BIOMED 2940: Internship in Biomedical Sciences
Supervised work experience to develop technical skills and enhance student knowledge in an area of biomedical science. Not intended for more than 50% independent research. Graded on S/U basis only.

Credit Hours: 2
Prerequisites: BIOMED 2110 or instructor's consent

BIOMED 2140: Companion Animals
(同 AN_SCI 2140) 宠物动物形成一个重要的部分, 它们成为我们的家庭成员。这门课程主要教授狗、猫和马。研究涵盖宠物行业、品种、健康、管理、护理、训练、人畜共患病、营养、繁殖、遗传学、人类动物互动、伴侣动物企业、和生物医学研究。学生可选择参与两个部分: 服务学习部分或传统课程部分。

Credit Hours: 3
Recommended: sophomore standing

BIOMED 2210: Microbiology for the Health Sciences
Introduction course for students in the applied health curricula. Presents biomolecules of life, enzyme interaction, physiology and structure of representative organisms. Emphasizes bacteria, viruses, fungi and protozoa of health significance. Graded on A-F basis only.

Credit Hours: 5
Prerequisites: CHEM 1100 or equivalent and instructor's consent

BIOMED 2230: Animal Sanitation and Disease Prevention
Preventative measures for diseases and parasites of farm animals.

Credit Hours: 3

BIOMED 2235: Domestic Animal Behavior
An examination of the effects of domestication on the behavior of companion and food animal species. Comparisons to similar animals in feral or wild conditions will be made. The causes, development and potential treatments of abnormal behavior will also be examined. Graded on A-F basis only.

Credit Hours: 3

BIOMED 2420: Biology of Healthy Living
(same as PH_THR 2420 and NEP 2420) Biology of inactivity as a casual factor in chronic disease.

Credit Hours: 3

BIOMED 3250: Parasitology
(same as BIO_SC 3250) Parasitism is considered as a fundamental type of interspecies interaction. Identifying characteristics, life cycle, and resulting disease caused by the common parasites of domestic animals, common laboratory animals, selected wildlife, and humans are described.

Credit Hours: 3
Prerequisites: five hours of biological science or zoology or equivalent or instructor's consent or an AAS degree in veterinary technology or instructor's consent required
Special emphasis is given to parasites that can be transmitted from animals to man.

Credit Hours: 3
Prerequisites: 8 hours of biology or instructor's consent

BIOMED 3300: Animal Welfare and Ethics
An introductory examination of ethical issues related to animal welfare, including animal use for food, research, and companionship, plus contemporary issues affecting companion animals, farm animals, and horses. Topics related to animal pain and legal status will also be discussed. Graded on A-F basis only.

Credit Hours: 3
Recommended: junior standing

BIOMED 3310: Equine Health Topics
An in-depth examination of equine disease and health topics that are pertinent to today's horse owner and veterinarian. The course will integrate horse management practices with disease recognition, control and prevention. Students will learn how to recognize problems and when to call a veterinarian. Emerging disease problems such as West Nile Virus will be examined as well as topics of continuing concern. Graded on A-F basis only.

Credit Hours: 3
Prerequisites: AN_SCI 4977 or equivalent or instructor's consent

BIOMED 3320: Comparative Microscopic Anatomy
The course will provide students with a background in the structure of body organs at the microscopic level. The material will emphasize structure-function relationship of cells and organs using material from diverse animal species, including human, that exemplify unique adaptations to environmental or physiological requirements.

Credit Hours: 3
Prerequisites: BIO_SC 1500 or equivalent

BIOMED 3326: Comparative Pharmacology
An introduction to terminology used in pharmacology. Mechanisms of drug administration, absorption, distribution, metabolism, and excretion are described. Treatment modalities in animals and humans are compared. Basics of drug actions and the medicolegal aspects of pharmacology are discussed.

Credit Hours: 3
Prerequisites: an AAS degree in veterinary technology or AN_SCI 3254 or BIO_SC 3700, or equivalent, or instructor's consent

BIOMED 4001: Topics in Biomedical Sciences
Topics in Biomedical Sciences.

Credit Hour: 1-99

BIOMED 4010: Life Sciences Research: Models and Methods
(cross-leveled with BIOMED 7010, V_PBIO 7010). A review of basic laboratory animal and non-animal research models and procedures commonly used in the life sciences area in academia and drug/chemical industry. Graded on A-F basis only.

Credit Hours: 3
Prerequisites: Biology or Cell Biology; junior standing required

BIOMED 4100: Veterinary Clinical Chemistry
(cross-leveled with V_PBIO 7100). This course is designed to hone the skills of the practicing veterinary technician, veterinary student, or veterinarian and assumes some basic knowledge of normal serum chemistry and urinalysis results. The review of normal will be minimal and emphasis will be placed on clinical serum chemistry and urinalysis findings associated with diseases. The graduate level course will include discussion of ancillary tests and more extensive case interpretations.

Credit Hours: 3
Prerequisites: An AAS or equivalent degree in veterinary technology from an American Veterinary Medical Association accredited program; Undergraduate physiology on mammals (AN_SCI 3254, BIO_SC 3700, or equivalent

Recommended: BIOMED 2110 and BIOMED 3200 or instructor's consent

BIOMED 4110: Veterinary Cytology
(cross-leveled with V_PBIO 7110). This course of Veterinary Cytology is designed to hone the skills of the practicing Veterinary Technician, Veterinary Student, or Veterinarian and assumes some basic knowledge of microscope usage and normal hematology. The review of normal cells will be minimal and emphasis will be placed on findings associated with inflammatory and neoplastic diseases. The graduate level course will include discussion of ancillary tests, special stains and treatment alternatives. The focus will be on canine and feline diseases but some common equine and bovine disease. Prerequisites: An AAS or equivalent degree in veterinary technology from an American Veterinary Medical Association-accredited program, or instructor's consent

Credit Hours: 2
Recommended: BIOMED 3200 and BIOMED 2110

BIOMED 4120: Principles of Toxicology
(cross-leveled with V_PBIO 7120). This course will provide an introduction to the general principles of toxicology, including the history and scope of the field; risk assessment and management; mechanisms of toxicology; the disposition of toxicants; non-target organ-directed toxicity; toxic responses of specific target organs; and various toxicological application, such as environmental toxicology.

Credit Hours: 3
Prerequisites: one year of college chemistry and biology, each or instructor's consent

BIOMED 4200: Veterinary Public Health and Community Practice
Veterinary Public Health is the field of veterinary medicine that deals with food production and safety, zoonosis (animal to human) disease control, prevent and control of environmental contamination, and the role of animals in society. Graded on A-F basis only.

Credit Hours: 3
Prerequisites: AN_SCI 3254 or BIO_SC 3700 or equivalent, AAS or equivalent degree from AVMA-accredited program or instructor's consent

BIOMED 4210: Animal Issues in Disasters
(cross-leveled with V_PBIO 7210). This course describes the various aspects of responding to disasters that involve animals. Government involvement, legal requirements, effects on the human-animal bond,
preparation for disasters of different kinds, and impacts on animal-related
businesses will be discussed.

Credit Hours: 1
Prerequisites: an AAS in veterinary technology from an American
Veterinary Medical Association accredited program, or equivalent
training, or instructor's consent

BIOMED 4300: Clinical Veterinary Neurology
Clinical veterinary neurology will review the neurologic examination,
common neurologic diseases and techniques to properly care for
the neurologic patient. The course organization is based primarily on
neuroanatomic localization of disease. Graded on A-F basis only.
Credit Hours: 3
Prerequisites: AAS in Veterinary Technology or BIOMED 3219 and
3100 or instructor's consent; junior or senior standing

BIOMED 4320: Fundamentals of Small Animal Emergency and
Critical Care
(cross-leveled with V_BSCI 7320). This course will provide students with
the knowledge and skills to assist in small animal medical emergency and
critical care facilities.
Credit Hours: 3
Prerequisites: An AAS in veterinary technology from an American
Veterinary Medical Association accredited program, or equivalent
training, or instructor's consent

BIOMED 4333: Veterinary Cell Biology
(same as V_BSCI 5506). Course material stresses cell biology as
related to animal health and medical issues. A comprehensive course
overviewing molecular and biochemical issues of cell function especially
as related to medicine and the underlying molecular causes of disease.
Credit Hours: 4
Prerequisites: BIO_SC 1500, or equivalent, 1 course in biochemistry or
4 credit hours in chemistry; or instructor's consent

BIOMED 4400: Veterinary Surgical Nursing
Veterinary Surgical Nursing will enable the student to properly identify,
care for, and maintain surgical equipment. The course will also
prepare the student to learn surgical anatomy as well as the potential
complications of common clinical setting surgeries. Graded on A-F basis
only.
Credit Hours: 3
Prerequisites: BIOMED 2111, BIOMED 3219, and BIOMED 3100, or
instructor's consent

BIOMED 4410: Small Animal Physical Rehabilitation
This course will review the science of veterinary rehabilitation,
assessment of rehabilitation patients, and the techniques used to treat
these patients. Graded on A-F basis only.
Credit Hours: 3
Prerequisites: AAS degree in veterinary technology or BIOMED 2110
or HTH_PR 2190 or equivalent, plus BIOMED 3219 or PTH_AS 2201 or
equivalent, or instructor's permission

BIOMED 4500: Equine Critical Care and Nursing
This course provides advanced information for veterinary technicians,
veterinary assistants, and pre-veterinary students wishing to enhance
and focus their understanding of equine critical care and nursing
concepts. Course graded on A-F basis only.
Credit Hours: 3
Prerequisites: AN_SCI 2095 and AN_SCI 3254 or BIO_SC 3700 or
equivalents, AAS or equivalent degree from AVMA-accredited program or
instructor's consent

BIOMED 4510: Equine Clinical Anatomy: Forelimbs
(cross-leveled with V_BSCI 7510). Basic foundation in selected aspects
of equine clinical anatomy from veterinary technicians, pre-veterinary
students, and other students wishing to enhance their understanding of
anatomical structures of the horse's forelimbs.
Credit Hour: 1
Prerequisites: five hours of biologic science or zoology, or equivalent,
or instructor's consent, or an AAS or equivalent degree in veterinary
technology from an American Veterinary Medical Association accredited
program

BIOMED 4520: Equine Clinical Practice
This course is an introduction to a common medical conditions of the
horse. Emphasis will be placed on the presenting complaint and the
veterinarians approach to diagnosis, treatment, and prognosis.
Credit Hour: 1
Prerequisites: BIOMED 2110, BIOMED 2111 and AN_SCI 4977 or
their equivalents, or an associate's degree in veterinary technology, or
instructor's consent

BIOMED 4593: Internship in Veterinary Medical Technical Specialties
Supervised work experience in the MU Veterinary Medical Teaching
Hospital of affiliated veterinary medical specialty practices or in MU
laboratory animal facilities to develop technical skills and knowledge
relevant to becoming a specialist in veterinary medical technology. A
written report and oral presentation are required. Graded on S/U basis
only.
Credit Hour: 1-6
Prerequisites: junior standing, an AAS degree from an AVMA accredited
veterinary technical program or its equivalent, and instructor's consent

BIOMED 7010: Life Sciences Research: Models and Methods
(same as V_BSCI 7010; cross-leveled with BIOMED 4010). A review of
basic laboratory animal and non-animal research models and procedures
commonly used in the life sciences area in academia and drug/chemical
industry. Graded on A-F basis only.
Credit Hours: 3
Prerequisites: Biology or Cell Biology

BIOMED 9090: Research - Biomedical Sciences
Research hours for BMS doctoral students continuous enrollment.
Graded on S/U basis only.
Credit Hour: 1-99
Prerequisites: instructor's consent
BIOMED 9434: Gonadal Function
(same as AN_SCI 9434). Survey of current and in-depth mechanisms involved in ovarian, testicular, and epididymal function. Emphasis will be given to comparative differences in gonadal functions among domestic animals.

Credit Hours: 3
Prerequisites: AN_SCI 4314 or equivalent, a course in endocrinology, and biochemistry or cell biology

V_BSCI 5011: Veterinary Anatomy
In-depth study of the structure of the horse, ox, sheep, goat, pig and avian species. (Instructional periods 3 and 4).

Credit Hours: 3

V_BSCI 5012: Veterinary Anatomy with Laboratory
Continuation of V_BSCI 5011. In-depth study of the structure of the horse, ox, sheep, goat, pig and avian species. (Instructional periods 3 and 4).

Credit Hours: 3

V_BSCI 5020: Developmental Anatomy
Provides a comprehensive and rational interpretation of the intricate mechanisms of normal development to better understanding the complex anatomy of the adult. A substantial portion will be dedicated to commonly encountered congenital abnormalities for each major organ system.

Credit Hours: 0.5
Prerequisites: 1st year Veterinary students

V_BSCI 5021: Developmental Anatomy
Provides a comprehensive and rational interpretation of the intricate mechanisms of normal development to better understanding the complex anatomy of the adult. A substantial portion will be dedicated to commonly encountered congenital abnormalities for each major organ system.

Credit Hours: 0.5
Prerequisites: 1st year Veterinary students

V_BSCI 5051: Veterinary Gastrointestinal
Continuation of V_BSCI 5504. Physiology of the gastrointestinal tract, exocrine pancreas and liver. Lecture and lab designed to emphasize principles important to the practice of veterinary medicine.

Credit Hours: 2

V_BSCI 5052: Veterinary Endocrinology and Reproductive Physiology
Continuation of Veterinary Biomedical Science 5051. Comparative endocrinology and reproductive biology.

Credit Hours: 2

V_BSCI 5100: Veterinary Neuroscience
A laboratory and lecture-based course emphasizing the applied anatomy and physiology of the nervous system of domestic animals.

Credit Hours: 2
Prerequisites: first year Veterinary students

V_BSCI 5050: Veterinary Anatomy with Laboratory
Correlative study of the anatomy of domestic and laboratory animals in which the developmental and gross anatomy are integrated. A segment is devoted to neuroanatomy. Dissection includes the dog, cat and common laboratory animals. (Instructional periods 1 and 2).

Credit Hours: 4

V_BSCI 5052: Veterinary Microscopic Anatomy with Laboratory
A study of microscopic anatomy including cytology, histology of basic tissues and microscopic anatomy of cardiovascular, urinary, respiratory systems and the special senses and integument. (Instructional periods 1 and 2).

Credit Hours: 3

V_BSCI 5053: Veterinary Microscopic Anatomy
Particular attention to digestive systems, endocrine organs and reproductive systems. (Instructional period 3).

Credit Hours: 2

V_BSCI 5054: Veterinary Physiology
This course is designed to provide an opportunity and motivation for the student to acquire an understanding of the physiological principles on which rational therapy in medical practice is based. Topics include: Cellular Neurophysiology, Muscle, Cardiovascular, Renal and Respiratory Physiology. The course also encourages the student to apply these principles in solving problems so that it becomes habitual for him or her to think in terms of "mechanisms of action" as he or she approaches a problem in disturbed physiology.

Credit Hours: 5

V_BSCI 5506: Veterinary Molecular and Cellular Biology
(same as V_BSCI 7333) A comprehensive course overviewing molecular and biochemical issues of cell function especially as related to medicine and the underlying molecular causes of disease.

Credit Hours: 4

V_BSCI 5507: Veterinary Pharmacology with Laboratory
General principles of pharmacy, pharmacokinetics, and pharmacodynamics, with emphasis on drugs affecting the central and autonomic nervous system, cardiovascular and hematologic systems.

Credit Hours: 3

V_BSCI 5508: Veterinary Pharmacology
Continuation of V_PBIO 5507. Antiseptics, autacoids, hemostatics and anticoagulants, fluid and electrolytes, reproductive, endocrine, and gastrointestinal drugs.

Credit Hours: 2

V_BSCI 5509: Veterinary Toxicology
(Same as V_BSCI 8509) Local and various systemic clinical responses of domestic animals to foreign chemicals including metals, pesticides, water-and food-borne agents, biotoxins, industrial and plant toxins. The

**principles, mechanism(s) of action, diagnosis, prevention and treatment of chemical intoxications are also presented.**

**Credit Hours:** 3
V_BSCI 9090: Research in Veterinary Biomedical Sciences
Research in Veterinary Biomedical Sciences. Graded on S/U basis only.
Credit Hour: 1-99

V_BSCI 9425: Microvascular Circulatory Function
(same as MPP 9434). An in-depth study of microcirculatory structure and function in various tissues with emphasis on recent developments in the understanding of the mechanisms involved in nutrient supply, edema formation, lymphatic function and fluid balance.
Credit Hours: 3
Prerequisites: V_BSCI 8420 and V_BSCI 8422 or Mammalian Physiology or equivalent

V_BSCI 9431: Control of Energy Metabolism
(same as MPP 9431). This advanced elective is in a lecture/discussion format using primary literature to explore how cells organize and regulate metabolism to meet energy demands.
Credit Hour: 1-3
Recommended: Introductory physiology and molecular biology

V_BSCI 9435: Molecular Exercise Biology
(same as MPP 9435). Integrated adaptations of adipose tissue, blood vessels, bone, brain, heart, immune, liver, microbiome, and skeletal muscle to physical training during life. Lifecourse emphasis will be placed upon the role of physical activity during growth and aging in increasing and decreasing, respectively, cardiovascular fitness and strength fitness. The roles of the level of cardiovascular and strength fitness in slowing the onset of chronic diseases and death will be one outcome of the curriculum. Graded on A-F basis only.
Credit Hours: 3
Recommended: Introductory physiology and molecular biology

V_BSCI 9462: Hormone Action
(same as BIOCHM 9462). A lecture course with weekly assigned readings. Topics will include: a description of selected polypeptide, steroid and other hormones and their biological effects; receptors; second messengers; protein phosphorylation in hormone mediation; growth factors; cellular oncogenes.
Credit Hours: 2
Prerequisites: BIOCHM 7272

V_BSCI 9467: Neural Cardiorespiratory Control
(same as MPP 9437). Course objectives include developing a general understanding of CNS mechanisms in the regulation of the cardiovascular and respiratory system, including autonomic, neurohumoral and body fluid homeostatic mechanisms, gaining knowledge of the major advances and topics in the field and becoming familiar with some of the methods used to study CNS cardiorespiratory regulation. Graded on A-F basis only.
Credit Hours: 3
Prerequisites: instructor's consent

V_PBIO 3551: Introduction to Immunology I
Comprehensive introduction to the basic principles of immunology. The course is designed for undergraduates majoring in biology, biochemistry or health professions. Introduction to cells and organs of the immune system, innate and adaptive immunity, development, activation and effector functions of lymphocytes, hypersensitivity, host response to infection and vaccination, autoimmunity and tumor immunology. Introduction to Immunology 1. Graded on A-F basis only.
Credit Hours: 3
Prerequisites: BIO_SC 2300
Recommended: BIO_SC 2200

V_PBIO 3554: Introduction to Virology
Comprehensive introduction to the basic principles of virology. The course is designed for undergraduates majoring in biology, biochemistry, or health professions. The course covers general virology including the molecular structure of viruses, the multiplication strategies of the major virus families, and viral latency, persistence, and oncology. The major families of the bacterial, plant, and animal viruses are discussed. Human viruses and infectious diseases are emphasized. Viral immunology, viral defenses, viral vaccines and antiviral compounds will also be addressed. Graded on A-F basis only.
Credit Hours: 3
Prerequisites: BIO_SC 2300
Recommended: BIO_SC 3750

V_PBIO 4787: Historical, Societal and Ethical Topics in Medicine and Biomedical Research
(cross-leveled with V_PBIO 7787). Advances in medicine, genetics, reproduction and technologies underpinning biomedical research can have profound implications not only scientifically but in terms of societal and ethical impact. Using several historical events such as the establishment of the first immortal cell line, the Tuskegee syphilis study, the eugenics movement in the United States and the cloning of Dolly the sheep as starting points, we will explore the historical, societal and ethical context and issues surrounding these events and relate them to current ethical and moral questions that have been generated by recent scientific and medical progress. Graded on A-F basis only.
Credit Hours: 2
Prerequisites: B or better in BIO_SC 2300 and BIO_SC 2200

V_PBIO 5511: Veterinary Immunology
(same as V_PBIO 8451). Basic immunology techniques. Topics include innate and adaptive immunity, development of the immune system, induction and expression of the immune response, structure and function of antibodies, antigen-antibody reactions, the major histocompatibility complex, aspects of immunology in disease.
Credit Hour: 1.5

V_PBIO 5512: Veterinary Immunology
(same as V_PBIO 8451). Continuation of V_PBIO 5511.
Credit Hour: 1.5

V_PBIO 5552: Veterinary Bacteriology with Laboratory
Classification and properties of pathogenic bacteria and fungi of animals; relationship to public health; considers pathogenesis, immunology of infection. Instructional period 5.
Credit Hours: 3
Prerequisites: enrollment in the College of Veterinary Medicine
V_PBIO 5553: Veterinary Bacteriology II  
Continuation of V_PBIO 5552. Instructional period 6.  
Credit Hours: 2.5

V_PBIO 5554: Veterinary Virology  
(same as V_PBIO 8454). Classification and properties of viruses. Considers the etiologic, pathologic and immunologic aspects of viral diseases of animals. Instructional periods 6 and 7.  
Credit Hours: 2.5  
Prerequisites: enrollment in the College of Veterinary Medicine

V_PBIO 5555: Epidemiology and Biostatistics with Laboratory  
(same as V_PBIO 8455). This course introduces students to methods of determining the influence of disease on populations and how this information is applied to individual animals. Biostatistics and evidence based medicine are also discussed in this course. The knowledge gained in this course is applied to reading professional literature during the course. Instructional period 4.  
Credit Hours: 2

V_PBIO 5557: Veterinary Parasitology with Laboratory  
(same as V_PBIO 8457). Parasites and parasitic diseases of ruminants, horses, swine, dogs, cats, poultry and other animals. Includes classification, morphology, and bionomics of protozoa, helminths, and arthropods. Instructional period 6.  
Credit Hours: 3

V_PBIO 5558: Veterinary Public Health  
(same as V_PBIO 8458). In this course students are introduced to the wide range of veterinary involvement in maintaining and assuring human health, nationally and globally. Topics discussed include: agencies such as USDA, FDA, CDC, food safety and meat inspection, veterinary responsibility in identifying diseases, legal issues of drug use, and zoonotic diseases. Instructional period 7.  
Credit Hours: 2

V_PBIO 5575: Veterinary Pathology with Laboratory  
General Pathology. Tissue reactions to various disease agents in domestic animals. Instructional period 5.  
Credit Hours: 3

V_PBIO 5576: Veterinary Systemic and Special Pathology with Laboratories  
Special and systemic pathology. Tissue reactions to disease in special systems in domestic animals. Instructional period 6.  
Credit Hours: 3

V_PBIO 5577: Veterinary Systemic and Special Pathology II with  
Follows the general pathology and continues the systemic pathology taught in V_PBIO 5576. The course, consisting of daily lectures and weekly laboratories, covers disease, mainly in domestic animals, of the following systems or organs: cardiovascular, respiratory, lymphoid, cutaneous, mammary, ophthalmic, and otic. Instructional period 7.  
Credit Hours: 3

V_PBIO 5578: Veterinary Clinical Pathology with Laboratory  
Physiologic basis, interpretation and clinical application of laboratory assays in hematology, chemistry, cytology, and urinalysis, utilization of laboratory methods to define pathological states and to diagnose disorders of domestic animals. Instructional period 8.  
Credit Hours: 3  
Prerequisites: enrollment in College of Veterinary Medicine

V_PBIO 5579: Veterinary Genomics  
Study of genomes, an organism's entire set of the genetic information. Used for detection of pathogen genomes, and markers for mutation causing inherited disease. Instructional period 5.  
Credit Hour: 1

V_PBIO 5580: Introduction to Veterinary Informatics with Laboratory  
Introduces concepts of veterinary informatics and development of core informatics competencies necessary for successful veterinary practice. The knowledge and skills in this course address topics such as data retrieval, information evaluation, medical records, practice management, communication skills and telemedicine. Instructional period 5.  
Credit Hour: 1

V_PBIO 5581: Animals in Emergencies & Basic Emergency Response Training for Vet Students  
This course will enable veterinary and graduate students to understand their role in society during disasters and credential as responders. Graded on A-F basis only.  
Credit Hour: 1  
Prerequisites: Students must be enrolled in the College of Veterinary Medicine and pursuing a DVM degree or be a student pursuing an MPH degree. Instructor consent required for non-veterinary graduate students seeking MPH degrees

V_PBIO 5591: Introduction to Avian Medicine  
Introduction to Avian Medicine  
Credit Hour: 1

V_PBIO 5595: Foundations in Veterinary Research and Discovery  
This course will introduce veterinary students to concepts of research including hypothesis development, experimental design, data interpretation, grantsmanship, responsible conduct of research, biomedical research careers and presentation and publication methods.  
Credit Hours: 2

V_PBIO 6010: Laboratory Animal Medicine  
Principles of Veterinary Medicine applied to laboratory animals as pets and in research. Husbandry, handling and clinical techniques, diseases, and use as disease models are discussed. Instructional period 8.  
Credit Hour: 1.5
V_PBIO 6647: Diagnostic Pathology and Special Species Medicine
Application of laboratory techniques used to diagnose disease by macroscopic, microscopic, biochemical, microbiologic, and toxicologic findings. Case method of teaching. Domestic avian species and laboratory animals included. Six times yearly.
Credit Hours: 8

V_PBIO 6676: Laboratory Animal Medicine and Management
Elective
Elective offered 3rd- and 4th-year students, subject to approval of course coordinator and supervising faculty. Concentrated study/experience in laboratory animal disease(s)/colony management. Available to veterinarians as a continuing education program.
Credit Hour: 2-6

Prerequisites: V_PBIO 5558 or instructor's consent

V_PBIO 6678: Epidemiology and Community Health
Elective covering advanced aspects of epidemiology and community health. Emphasizes problem solving and is designed to meet needs of the individual student. Instructional period arranged.
Credit Hour: 2-6

Prerequisites: V_PBIO 5558 or instructor's consent

V_PBIO 6679: Diagnostic Pathology and Special Species Medicine
Third- and fourth-year students. Elective. Approval of coordinator and supervisory staff. Continuation of V_PBIO 6647 with more depth. Available to D.V.M.'s as part of continuing education program.
Credit Hour: 2-6

V_PBIO 6684: Research Techniques in Veterinary Pathobiology
Research Techniques in Veterinary Pathobiology
Credit Hour: 1-6

V_PBIO 7100: Veterinary Clinical Chemistry
(cross-leveled with BIOMED 4100). This course is designed to hone the skills of the practicing veterinary technician, veterinary student, or veterinarian and assumes some basic knowledge of normal serum chemistry and urinalysis results. The review of normal will be minimal and emphasis will be placed on clinical serum chemistry and urinalysis findings associated with diseases. The graduate level course will include discussion of ancillary tests and more extensive case interpretations.
Credit Hours: 2
Prerequisites: A BS or BSA in veterinary technology or DVM

V_PBIO 7110: Veterinary Cytology
(cross-leveled with BIOMED 4110). This course of Veterinary Cytology is designed to hone the skills of the practicing Veterinary Technician, Veterinary Student, or Veterinarian and assumes some basic knowledge of microscope usage and normal hematology. The review of normal cells will be minimal and emphasis will be placed on findings associated with inflammatory and neoplastic diseases. The graduate level course will include discussion of ancillary tests, special stains and treatment alternatives. The focus will be on canine and feline diseases but some common equine and bovine disease.
Credit Hours: 2
Prerequisites: DVM or equivalent degree or instructor's consent

V_PBIO 7120: Principles of Toxicology
(cross-leveled with BIOMED 4120). This course will provide an introduction to the general principles of toxicology, including the history and scope of the field; risk assessment and management; mechanisms of toxicology; the disposition of toxicants; non-target organ-directed toxicity; toxic responses of specific target organs; and various toxicological application, such as environmental toxicology.
Credit Hours: 3
Prerequisites: BS in Biology, Biochemistry, or equivalent, or permission of instructor

V_PBIO 7210: Animal Issues in Disasters
(cross-leveled BIOMED 4210). Animal Issues in Disasters describes the various aspects of responding to disasters that involve animals. Government involvement, legal requirements, effects on the human-animal bond, preparation for disasters of different kinds, and impacts on animal-related businesses will be discussed.
Credit Hour: 1
Prerequisites: a bachelor's degree in a biological science or veterinary technology, or DVM degree, or instructor's consent

V_PBIO 7787: Historical, Societal and Ethical Topics in Medicine and Biomedical Research
(cross-leveled with V_PBIO 4787). Advances in medicine, genetics, reproduction and technologies underpinning biomedical research can have profound implications not only scientifically but in terms of societal and ethical impact. Using several historical events such as the establishment of the first immortal cell line, the Tuskegee syphilis study, the eugenics movement in the United States and the cloning of Dolly the sheep as starting points, we will explore the historical, societal and ethical context and issues surrounding these events and relate them to current ethical and moral questions that have been generated by recent scientific and medical progress. Graded on a A-F basis only.
Credit Hours: 2
Prerequisites: Consent of Instructor

V_PBIO 8090: Thesis Research in Veterinary Pathobiology
Open to graduate students with requisite preparation. Research on specific animal diseases, prevention and treatment. Graded on a S/U basis only.
Credit Hour: 1-99

V_PBIO 8401: Topics in Veterinary Pathobiology
Courses with lectures in various topics in veterinary pathobiology will be given on a trial basis, depending on faculty expertise and student demand. Credit hours are usually 1 or 3. Specialized topics will be covered.
Credit Hour: 1-99
Prerequisites: instructor's consent

V_PBIO 8410: Seminar in Veterinary Pathobiology
Discussion of current research methods in veterinary pathobiology.
Credit Hour: 1

<td>This course will focus on arthropod vectors (insects and ticks) and the medically important pathogens / diseases that they transmit, including arboviruses, bacteria, protozoa and nematodes. An emphasis will be on the interactions between the vectors and disease-causing pathogens. Topics include: introductions to systematics, anatomy, physiology, life cycles, and ecology of vectors and classification and biology of the pathogens responsible for such diseases as dengue, yellow fever, malaria, leishmaniasis, lymphatic filariasis, etc. The focus will be not only on specific pathogen-vector interactions but also on big picture topics / discussions of vector competence, insecticide resistance, vector control (including genetically modified insects) and other current issues in vector biology research. Students will learn how these important vector-borne diseases are transmitted, how they are spread and introduced into new regions, and what control strategies exist or are currently under development. Students will realize what impact vector-borne diseases have on global human and animal health as well as develop and hone critical thinking skills.</td>
