Biochemistry

Michael Chapman, Wurdack Professor & Chair
College of Agriculture, Food and Natural Resources
117 Schweitzer Hall
Phone: (573) 882-4845

A course of study in Biochemistry emphasizes the application of chemical principles to biological systems and leads to the Bachelor of Science in Biochemistry. The program requires rigorous course work in the basic sciences, culminating with a two course capstone experience of discipline specific problems and laboratory techniques. Students are encouraged to gain research experience through independent projects in faculty labs. The biochemistry degree prepares students for further study in graduate or professional school or for a career in biochemistry, biotechnology or the biological, chemical or medical sciences.

Faculty

Associate Research Professor B. Mooney
Assistant Research Professor Z. Lei, V. Mossine
Associate Teaching Professor S. Freyermuth
Assistant Teaching Professor R. Mehra-Chaudhary, T. Reilly

* Graduate Faculty Member - membership is required to teach graduate-level courses, chair master's thesis committees, and serve on doctoral examination and dissertation committees.
** Doctoral Faculty Member - membership is required to chair doctoral examination or dissertation committees. Graduate faculty membership is a prerequisite for Doctoral faculty membership.

Undergraduate

- BS in Biochemistry (http://catalog.missouri.edu/collegeofagriculturefoodandnaturalresources/biochemistry/bs-biochemistry/)

Graduate

- MS in Biochemistry (http://catalog.missouri.edu/collegeofagriculturefoodandnaturalresources/biochemistry/ms-biochemistry/)
- PhD in Biochemistry (http://catalog.missouri.edu/collegeofagriculturefoodandnaturalresources/biochemistry/phd-biochemistry/)

College of Agriculture, Food and Natural Resources; School of Medicine
117 Schweitzer Hall

Director of Graduate Studies: Charlotte Phillips

Biochemistry at the University of Missouri is a division of the College of Agriculture, Food and Natural Resources and a department of the School of Medicine. As a nationally ranked top 10 biochemistry department among public medical schools, we offer outstanding training that help students achieve their goals. We have 39 core faculty members and approximately 10 additional members, all of whom are available to mentor students in biochemistry. Nearly all facets of contemporary biochemical research are represented in their collective research interests. Our highly interactive program is an integral part of a campus-wide network of research programs including life sciences, genetics, nutrition, plant biochemistry and structural biology.

Interdisciplinary Area Programs

- PhD in Genetics Area Program
- Minors in Business, and College Teaching

The graduate programs of the Department of Biochemistry prepare students for professional careers in academic institutions, industry and government. The Department of Biochemistry is administered by the College of Agriculture, Food and Natural Resources and the School of Medicine. It provides a great range of opportunities for multidisciplinary study in plant, animal and microbial biochemistry, molecular biology, structural biology, and chemical biology.

Faculty Research

Virtually every important area of biochemistry and molecular biology is represented among the research interests of the faculty. These interests focus on plant biochemistry, hormonal control of plant and animal-cell metabolism, growth-factor structure and function, enzyme reaction mechanisms, biochemistry of development, biochemistry of human disease, lipid and carbohydrate metabolism, molecular biology, analytical biochemistry, proteomics, systems biochemistry, and structural biochemistry.

Facilities

The department has modern, well-equipped laboratories in the Life Sciences Center, Schweitzer Hall, Schlundt Annex, and Stephens Hall. Additional faculty are housed in the Animal Sciences Research Center, Chemistry Building, Dalton Cardiovascular Research Center, Mason Eye Institute, and the Truman Veterans Hospital.

Plans of Study

All students participate in individually planned research programs and have a supervised teaching experience along with course work. Students are expected to complete a program of courses in biochemistry and selected courses in modern biology and chemistry.

Careers

Biochemistry at the University of Missouri provides world-class training that can open the door to a wide variety of career opportunities in the life sciences. Our graduates have career opportunities available in academia, industry, agriculture or medicine.

Required Application Materials

All pre-requisites and application materials must be submitted by the annual deadline.
MD/PhD in Biochemistry Dual Degree Program

Students already accepted into the School of Medicine at MU may apply to the Department for acceptance into the MD/PhD program. Students matriculating in the MD/PhD degree program must complete degree requirements of both the School of Medicine and the Graduate School. For information and for application forms, email gradprogram@missouri.edu or write the Director of Graduate Admissions in Biochemistry, 117 Schweitzer Hall, Columbia, MO 65211, or visit the website https://biochem.missouri.edu/.

BIOCHM 1090: Introduction to Biochemistry
Fundamental concepts in biochemistry and molecular biology: structure function relationships, reactivity, thermodynamics, gene expression. Professional skills for biomedical careers. Graded on A-F basis only.

Credit Hours: 3
Prerequisites or Corequisites: CHEM 1320
Prerequisites: MATH 1100 or MATH 1160 or MATH 1500 and Freshman or Sophomore standing

BIOCHM 1094: Introductory Biochemistry Laboratory
Techniques course involving biochemical experiments with proteins, nucleic acids, carbohydrates and lipids. Instruction in the use and application of instrumentation in biochemistry; purification or proteins and enzyme activity assays. Focus on interpretation of data and error analysis, critical thought and analytical skills. Graded on A-F basis only.

Credit Hours: 3
Prerequisites: BIOCHM 1090; Biochemistry majors only

BIOCHM 2110: The Living World: Molecular Scale
Survey of modern biochemistry and biotechnology. Structure and function of DNA, proteins, lipids and carbohydrates. The role of biopolymers in life processes and everyday living is emphasized.

Credit Hours: 3
Prerequisites: for non-Biochemistry majors only

BIOCHM 2112: Biotechnology in Society
Biotechnology in a social context covers three areas: introduction to terminology and concepts, specific biotechnological applications to modern problems, and ethical questions.

Credit Hours: 3
Prerequisites: for non-biochemistry majors only

BIOCHM 2112H: Biotechnology in Society - Honors
Biotechnology in a social context covers three areas: introduction to terminology and concepts, specific biotechnological applications to modern problems, and ethical questions.

Credit Hours: 3
Prerequisites: for non-biochemistry majors only

BIOCHM 2480: Introduction to Macromolecular Structure and Function
The function of biochemical macromolecules is directly related to their structure. The three-dimensional structures of proteins, nucleic acids, polysaccharides and membranes are each explored in the context of their functions and their microenvironments within living organisms. Graded on A-F basis only.

Credit Hours: 3
Prerequisites: C- or higher in BIOCHM 1090
Corequisites: CHEM 2100 or CHEM 2110

BIOCHM 2482: Integrative Cellular and Molecular Biochemistry
This course enhances students' understanding of biochemistry by placing macromolecules and biochemical reactions in a cellular and organismal context. Experimental examples from primary literature are used to introduce students to classical and modern biochemical techniques, so that students develop skills in analyzing and interpreting experimental data relevant to cellular and molecular biochemistry. Students will learn how (sub)cellular compartmentalization plays an important role in the correct outcome of biochemical processes; and how perturbations of cellular biochemical pathways can result in broader biological defects, including in human diseases. This course emphasizes the interdisciplinary nature of biochemistry, thereby encouraging students to think in an integrated manner using different perspectives and approaches. Graded on A-F basis only.

Credit Hours: 3
Prerequisites: BIO_SC 1500 and BIOCHM 2480

BIOCHM 2950: Undergraduate Research in Biochemistry
Research for students in which independent research is less than 50% of total. Graded on S/U basis only.

Credit Hour: 1-3
Prerequisites: departmental consent

BIOCHM 3630: General Biochemistry
Survey of biochemistry; static/dynamic aspects of carbohydrates, lipids, proteins, nucleic acid. Discussion of metabolic pathways, energy production, and metabolic regulatory mechanism.

Credit Hours: 3
Prerequisites: CHEM 2100 or CHEM 2110

BIOCHM 4001: Topics in Biochemistry
Experimental courses; highly specialized topics taught infrequently or courses taught by visiting professors.

Credit Hour: 1-99

BIOCHM 4270: Biochemistry
(cross-leveled with BIOCHM 7270). First semester of comprehensive biochemistry course: metabolic pathways, amino acids/proteins, carbohydrates, lipids, nucleic acids, kinetics, energy requirements, metabolic regulation in living cells.

Credit Hours: 3
Prerequisites: CHEM 2110

BIOCHM 4272: Biochemistry
(cross-leveled with BIOCHM 7272). Second semester of a comprehensive biochemistry course, including metabolism of carbohydrates, fatty acids, steroids, amino acid synthesis and metabolism, molecular genetics, hormones, photosynthesis and integrated metabolism.
Biochemistry

Credit Hours: 3  
Prerequisites: C- or higher in BIOCHM 4270

BIOCHM 4300: Physical Chemistry of Biological Systems
To present fundamental principles of physical chemistry in the context of the structure and function of biological macromolecules. Graded on A-F basis only.
Credit Hours: 3  
Prerequisites or Corequisites: BIOCHM 4270  
Prerequisites: MATH 1500 and PHYSCS 1210 or PHYSCS 2750  
Recommended: MATH 1700 and PHYSCS 1220 or PHYSCS 2760

BIOCHM 4385: Problems in Biochemistry
Credit Hour: 1-3  
Prerequisites: departmental consent

BIOCHM 4510: Single Molecule Biophysics
(same as PHYSCS 4510; cross-leveled with BIOCHM 7510, PHYSCS 7510). The course provides an overview of the biophysics of enzymes, nucleic acids and the cytoskeleton. Topics covered will include diffusion, molecular motors, polymerization and the cytoskeleton and the polymer properties of nucleic acids and microtubules.
Credit Hours: 3  
Prerequisites: PHYSCS 2760

BIOCHM 4945: Experiential Learning in Industry Internship in Biochemistry
Learning experience combining observation, application, and reflection in a discipline-based industry internship. Course appears on transcript for zero credit and does not count toward full-time enrollment. No tuition or fees are charged. Graded on S/U basis only.
Credit Hours: 0  
Prerequisites: instructor's consent

BIOCHM 4950: Advanced Undergraduate Research in Biochemistry
Research credit for students doing an independent research project under the guidance of a faculty member. Project must be arranged by student and faculty member prior to registration. Graded on A-F basis only.
Credit Hour: 1-3  
Prerequisites: departmental consent

BIOCHM 4955: Experiential Learning in Research in Biochemistry
A supervised learning experience contributing to faculty research. Course appears on transcript for zero credit and does not count toward full-time enrollment. No tuition or fees are charged. Graded on S/U basis only.
Credit Hours: 0  
Prerequisites: instructor's consent

BIOCHM 4960: Industrial Internship with Eurofins
This 5-credit course is a school and field-based learning experience combining the study, observation, and employment with Eurofins laboratories in Columbia, MO. The internship provides opportunities to apply skills, concepts and theories about biochemistry and analytical chemistry in a practical context. The purpose of the internship experience is to provide the intern with the opportunity to develop knowledge and skills deemed desirable for a career in the biotechnology industries. During the time indicated in this agreement for the internship experience, the intern is expected to become a productive employee of Eurofins. This course will provide technical instruction on commonly used laboratory skills and instrumentation at the University of Missouri followed by technical instruction on software and instrumentation at Eurofins. After the training period, the interns will have the opportunity to work at Eurofins full time for the summer.
Credit Hours: 5  
Prerequisites or Corequisites: BIOCHM 4272  
Prerequisites: BIOCHM 1090, BIOCHM 2484, BIOCHM 4270  
Recommended: CHEM 3200

BIOCHM 4971: Biochemistry of Obesity
The incidence of obesity and associated comorbidities has grown to epidemic proportions. In this course, students will explore the biochemical basis for body weight and energy homeostasis, and the mechanisms of dysregulation that can lead to obesity. Metabolism of carbohydrates and lipids will be reviewed, and their complex hormonal regulation will be introduced. Students will examine the biochemical bases of several fad diets or nutritional regimens, and the intersection between socioeconomic status and nutrition that can lead to obesity. The format of the course relies largely on the learning strategy employed by the MU School of Medicine, in which the students are given the responsibility for researching relevant topics (learning objectives) and teaching them to the rest of the class. Graded on A-F basis only.
Credit Hours: 2  
Prerequisites: BIOCHM 4272, BIOCHM 4974  
Prerequisites: BIOCHM 4270

BIOCHM 4972: Post-Normal Biochemistry
Post-normal science refers to research and results that have influence far beyond the laboratory, impacting issues in law, ethics and public policy. In this seminar-style course, students will explore the intersection of science, politics and public attitudes. They will apply their scientific training to explore issues that affect them as informed consumers and voters in a democratic society. Students will develop skills that will help them understand and communicate to the general public the scientific foundations underlying potentially contentious issues. Critical thinking skills will be honed through reflective writing assignments. Extensive classroom discussions will explore the means and consequences of the spread of misinformation, and how it can be combated. Graded on A-F basis only.
Credit Hours: 2  
Prerequisites or Corequisites: BIOCHM 4272  
Prerequisites: BIOCHM 4270
BIOCHM 4974: Biochemistry Laboratory
(cross-leveled with BIOCHM 7274). Techniques course involving analytical experiments with carbohydrates, lipids, proteins, nucleic acids; use of instrumentation in biochemistry; purification and kinetics of enzymes. One of two capstone courses required for biochemistry majors.

Credit Hours: 5
Prerequisites or Corequisites: BIOCHM 4272
Corequisites: BIOCHM 4970

BIOCHM 4974H: Biochemistry Laboratory - Honors
(cross-leveled with BIOCHM 7274). Techniques course involving analytical experiments with carbohydrates, lipids, proteins, nucleic acids; use of instrumentation in biochemistry; purification and kinetics of enzymes. One of two capstone courses required for biochemistry majors.

Credit Hours: 5
Prerequisites or Corequisites: BIOCHM 4272; Honors eligibility required
Corequisites: BIOCHM 4970

BIOCHM 4974W: Biochemistry Laboratory - Writing Intensive
(cross-leveled with BIOCHM 7274). Techniques course involving analytical experiments with carbohydrates, lipids, proteins, nucleic acids; use of instrumentation in biochemistry; purification and kinetics of enzymes. One of two capstone courses required for biochemistry majors.

Credit Hours: 5
Prerequisites or Corequisites: BIOCHM 4272
Corequisites: BIOCHM 4970

BIOCHM 4978: Cancer Biology
(same as BIO_SC 4978; cross-leveled with BIOCHM 7978, BIO_SC 7978). The cellular and molecular basis of cancer, with emphasis on the application of genomics, proteomics, and genetic manipulations in model organisms to the study of cancer biology.

Credit Hours: 3
Prerequisites: BIO_SC 2200 and BIO_SC 2300 or BIOCHM 4270
Recommended: BIO_SC 4976 or BIOCHM 4272

BIOCHM 4996H: Honors Thesis Research in Biochemistry
Laboratory research for honors students doing an honors thesis research project in their final two semesters. Enrollment limited to Honors eligible students with senior standing who have CAFNR honors approval. Graded on A-F basis only.

Credit Hour: 1-3
Prerequisites: departmental consent

BIOCHM 7085: Problems in Biochemistry
Problems in Biochemistry.

Credit Hour: 1-6
Prerequisites: Consent of Director of Graduate Studies required

BIOCHM 7270: Biochemistry
(cross-leveled with BIOCHM 4270). First semester of comprehensive biochemistry course: metabolic pathways, amino acids/proteins, carbohydrates, lipids, nucleic acids, kinetics, energy requirements, metabolic regulation in living cells.

Credit Hours: 3
Prerequisites: CHEM 2110

BIOCHM 7272: Biochemistry
(cross-leveled with BIOCHM 4272). Second semester of a comprehensive biochemistry course, including metabolism of carbohydrates, fatty acids, steroids, amino acid synthesis and metabolism, molecular genetics, hormones, photosynthesis and integrated metabolism.

Credit Hours: 3
Prerequisites: BIOCHM 7270

BIOCHM 7274: Biochemistry Laboratory
Techniques course involving analytical experiments with carbohydrates, lipids, proteins, nucleic acids; use of instrumentation in biochemistry; radioisotope tracers in metabolism; isolation, purification and kinetics of enzymes.

Credit Hours: 5
Corequisites: concurrent enrollment in BIOCHM 7270

BIOCHM 7510: Single Molecule Biophysics
(same as PHYSCS 7510; cross-leveled with BIOCHM 4510, PHYSCS 4510). The course provides an overview of the biophysics of enzymes, nucleic acids and the cytoskeleton. Topics covered will include diffusion, molecular motors, polymerization and the cytoskeleton and the polymer properties of nucleic acids and microtubules.

Credit Hours: 3
Prerequisites: PHYSCS 2760

BIOCHM 7978: Cancer Biology
(same as BIO_SC 7978). The course will cover major molecular and cellular aspects of cancer. Students will read original research articles, present overviews and lead class discussions.

Credit Hours: 3
Prerequisites: BIOCHM 4270, BIO_SC 2300 and BIO_SC 4976

BIOCHM 8060: Ethical Conduct of Research
(same as BIO_SC 8060). Discussion of ethical issues in biological research, including the rules and conventions for appropriate research conduct. Graded on S/U basis only.

Credit Hour: 1

BIOCHM 8070: Professional Communication Development
(same as BIO_SC 8070). The purpose of this course is to develop professional communication skills in students that are planning to attend graduate school or are in their first year of graduate training. Graded on A-F basis.

Credit Hour: 1-2
Prerequisites: Graduate standing is required. Graduate students must be enrolled in one of the PhD programs in the life sciences at MU and have completed less than 30 credit hours of graduate study at MU. Graduate students who participate in the IMSD T32 training program are required to take this class. IMSD T32 trainees are students who
are enrolled in one of four PhD programs (Biochemistry, Biology, MPT or BBCE) and are from backgrounds that are underrepresented in the biomedical sciences. Other graduate students in their first year of graduate school will be allowed to take this class, with permission of the instructor.

**BIOCHM 8090: Research in Biochemistry**

Research in biochemistry for qualified students, with counsel of faculty. Includes preparation of dissertation. Graded on a S/U basis only.  
**Credit Hour:** 1-99  
**Prerequisites:** Consent of Director of Graduate Studies required

**BIOCHM 8200: Principles and Research Practices in Biochemistry**

This course is to be taken by first year graduate students, and focuses on professional skills and basic principles and research practices applicable to Biochemistry and broadly to other STEM fields to provide first year students with background information to help launch their graduate careers. Key topics covered include understanding research experimental design, critical evaluation of the literature (library and online resources), best practices in publication, grant writing, and communicating science through both written and oral scientific presentations. Graded on A-F basis only.  
**Credit Hours:** 2

**BIOCHM 8240: Introduction to Graduate Biochemistry I**

(same as MPP 8500). Introduction to biochemistry for life science graduate students. Core course for Biochemistry students. This course is designed for first-year graduate students in Biochemistry. This course has two goals: (1) to provide the students with a core knowledge of fundamental biochemistry and biology that is the underpinning of current biomedical and basic research; (2) to provide students with the tools that will allow them to read, understand and critically analyze the primary biochemical and biomedical literature. To this end, the course covers aspects of biochemistry, cell biology, virology, immunology, molecular biology and physiology. The course is taught using a combination of faculty lectures and primary research articles.  
**Credit Hours:** 5  
**Prerequisites:** Undergraduate organic chemistry plus undergraduate biochemistry or molecular biology, their equivalent or permission of instructor

**BIOCHM 8260: Macromolecular Systems Integration**

To introduce graduate students to biochemistry at the graduate level with particular emphasis on genomics/gene expression and replication; proteomics/cell signaling and metabolism. Course graded on A-F basis only.  
**Credit Hours:** 4  
**Prerequisites:** BIOCHM 8240

**BIOCHM 8362: Introduction to Plant Metabolism**

(same as PLNT_SCI 8362 and BIO_SC 8362). This course is part of a series that aims to provide a solid conceptual foundation in interdisciplinary plant biology for graduate students with a research emphasis in plant biology. This course examines the basic concepts and techniques used to understand plant metabolism. Graded on A-F basis only.  
**Credit Hours:** 2

**BIOCHM 8365: Introduction to Molecular Cell Biology**

(same as BIO_SC 8365 and PLNT_SCI 8365). This course is part of a series that aims to provide a solid conceptual foundation in interdisciplinary plant biology for graduate students with a research emphasis in plant biology. This course examines the basic concepts and techniques used to understand molecular cell biology. Graded on A-F basis only.  
**Credit Hours:** 2

**BIOCHM 8432: Enzymology and Metabolic Regulation**

A basic introduction to the study of enzymes and their role in intermediary metabolism. Topics include enzyme kinetics, mechanisms of enzymatic catalysis and control of metabolic pathways.  
**Credit Hours:** 3  
**Prerequisites:** BIOCHM 7272

**BIOCHM 8434: Signaling in Molecular Cell Biology**

The objective of this course is to provide important foundations in cellular signaling in the context of biochemistry and cell biology for first and second year graduate students. The course focuses on cell-to-cell communication and intracellular signaling via different classes of cell surface receptors using specific receptor paradigms from human, other animals, plants, yeast and E.coli. Primary literature will be used for in-class discussions and homework assignments to highlight key experiments and introduce students to relevant experimental techniques. Graded on A-F basis only.  
**Credit Hours:** 3  
**Recommended:** BIO_SC 2300, BIOCHM 4270

**BIOCHM 8450: Rotation Research**

Introductory laboratory research. Graded on A-F basis only. Normally 1 hour per advisor per semester, two 1 hour sections can be taken per semester.  
**Credit Hour:** 1-2

**BIOCHM 9001: Topics in Biochemistry**

Experimental courses, highly specialized topics taught infrequently or courses taught by visiting professors.  
**Credit Hour:** 1-9

**BIOCHM 9087: Seminar in Biochemistry**

Review of current literature; individual presentation of research or classical science topics.  
**Credit Hour:** 1

**BIOCHM 9090: Research in Biochemistry**

Research in biochemistry for qualified students, with counsel of faculty. Includes preparation of dissertation. Graded on a S/U basis only.  
**Credit Hours:** 1-99
BIOCHM 9432: Molecular Biology II
(same as MICROB 9432 and BIO_SC 9432) Detailed experimental analysis of eukaryotic cellular and molecular biology relevant to cellular and viral gene expression, post-transcriptional and post-translational modifications and genome replication. Models for developmental genetic analysis and genetic determinants controlling developmental processes utilizing the current literature will be examined.

Credit Hours: 4

BIOCHM 9462: Hormone Action
A lecture course with weekly assigned readings. Topics will include: a description of selected polypeptide, steroid and other hormones and their biological effects; receptors; second messengers; protein phosphorylation in hormone mediation; growth factors; cellular oncogenes.

Credit Hours: 2
Prerequisites: BIOCHM 7272

BIOCHM 9468: Molecular Biology of Plant Growth and Development
(same as BIO_SC 9468). Molecular biology of plant hormones, signal transduction, environmental signals.

Credit Hours: 3
